Finance and Hedging in the Commercial Airline Industry Tony Webber,2024-09-13 When there is political tension or war in the Middle East or in Eastern Europe oil and jet fuel prices shoot upward If an airline isn't protected against these higher prices they can devastate its finances and send it quickly into bankruptcy This seemingly happens on a yearly basis Thankfully for most airlines they are able to protect themselves against higher oil and jet fuel prices at least in the short term by hedging using financial instruments The challenge for airlines is to determine which financial instruments they should use in which products they should hedge and how far out from fuel consumption they should hedge This book systematically explores the different financial instruments that airlines have to choose from and in what situations they should be used It will also present the reader with the options airlines have in terms of manipulating operational levers in response to higher fuel prices such as airfares capacity and fleet size once the protective benefits of hedging wear off

CRM & FFHH Facundo Conforti,2023-05-21 More than a century has passed since humans conquered the sky Like any conquest it required assuming countless risks to achieve it Once achieved the process of consolidation begins along with stabilization Time and hard work are what allow this stabilization to be secure Just like in every human conquest this process has not escaped the chronological logic of growth Of course aviation is not exempt from this developmental mechanism of conquests Unfortunately for this industry the process of growth comes with the loss of lives After more than a century of conquest it could be said that the aviation industry is in the stabilization phase achieving established reliable and sustainable safety standards If we have reached this stage it is the result of work research study and the construction of what we now know as a safety culture The conquest of the sky and safe aviation require constant actions to maintain and increase the levels of safety that have been achieved That is why this work highlights the most significant aspects of the development of concepts and techniques that have served served and will continue to serve flight crews in maintaining and improving the mentioned standards
