**Ecological Methodology** Charles J. Krebs, 1999 This coherent text translates the methods of statisticians into ecological English so that students may readily apply these methods to the real world Ecological Methodology Second Edition provides a balance of material on animal and plant populations It teaches students of ecology how to design the most efficient tests in order to obtain maximum precision with minimal work The first part of the text focuses on biological and technical issues in statistical methodology Students learn about advances that have been made in designing better sampling devices along with the techniques and equipment used for sampling The second part deals with creating solid statistical design and presents all methods that are well known to statisticians in a language and context that students will easily understand **Ecology**

Charles J. Krebs, 2009 Charles Krebs best selling majors level text approaches ecology as a series of problems that are best understood by evaluating empirical evidence through data analysis and application of quantitative reasoning No other text presents analytical quantitative and statistical ecological information in an equally accessible style for students Reflecting the way ecologists actually practice the new edition emphasizes the role of experiments in testing ecological ideas and discusses many contemporary and controversial problems related to distribution and abundance Ecology The Experimental Analysis of Distribution and Abundance Sixth Edition builds on a clear writing style historical perspective and emphasis on data analysis with an updated reorganized discussion of key topics and two new chapters on climate change and animal behavior Key concepts and key terms are now included at the beginning of each chapter to help students focus on what is most important within each chapter mathematical analyses are broken down step by step in a new feature called Working with the Data concepts are reinforced throughout the text with examples from the literature and end of chapter questions and problems emphasize application **Large Carnivores and the Conservation of Biodiversity** Justina Ray, Kent H. Redford, Robert Steneck, Joel Berger, 2013-04-09 Large Carnivores and the Conservation of Biodiversity brings together more than thirty leading scientists and conservation practitioners to consider a key question in environmental conservation Is the

conservation of large carnivores in ecosystems that evolved with their presence equivalent to the conservation of biological diversity within those systems Building their discussions from empirical long term data sets contributors including James A Estes David S Maehr Tim McClanahan Andr s J Novaro John Terborgh and Rosie Woodroffe explore a variety of issues surrounding the link between predation and biodiversity What is the evidence for or against the link Is it stronger in marine systems What are the implications for conservation strategies Large Carnivores and the Conservation of Biodiversity is the first detailed broad scale examination of the empirical evidence regarding the role of large carnivores in biodiversity conservation in both marine and terrestrial ecosystems It contributes to a much more precise and global understanding of when where and whether protecting and restoring top predators will directly contribute to the conservation of biodiversity Everyone concerned with ecology biodiversity or large carnivores will find this volume a unique and thought provoking

Lambert, Margaret A. H. Bryer, Jessica M. Rothman, 2024-07-26

Exploring everything from nutrients to food acquisition and research methods a comprehensive synthesis of the study of diet and feeding in nonhuman primates What do we mean when we say that a diet is nutritious Why can some animals get all the energy they need from eating leaves while others would perish on such a diet Why don't mountain gorillas eat fruit all day as chimpanzees do Answers to these questions about food and feeding are among the many tasty morsels that emerge from this authoritative book Informed by the latest scientific tools and millions of hours of field and laboratory work on species across the primate order and around the globe this volume is an exhaustive synthesis of our understanding of what why and how primates eat State of the art information presented at physiological behavioral ecological and evolutionary scales will serve as a road map for graduate students researchers and practitioners as they work toward a holistic understanding of life as a primate and the urgent conservation consequences of diet and food availability in a changing world      Arthropods of

Tropical Forests Yves Basset, 2003-01-23 Arthropods are the most diverse group of organisms on our planet and the tropical rainforests represent the most biologically diverse of all ecosystems This book written by 79 authors contributing to 35 chapters aims to provide an overview of data collected during recent studies in Australia Africa Asia and South America The book focuses on the distribution of arthropods and their use of resources in the rainforest canopies providing a basis for comparison between the forest ecosystems of the main biogeographical regions Topics covered include the distribution of

arthropods along vertical gradients and the relationship between the soil litter habitat and the forest canopy The temporal dynamics of arthropod communities habitats and food selection are examined within and among tropical tree crowns as are the effects of forest disturbance This important book is a valuable addition to the literature used by community ecologists conservation biologists entomologists botanists and forestry experts

**Artificial Intelligence Methods in the Environmental Sciences** Sue Ellen Haupt, Antonello Pasini, Caren Marzban, 2008-11-28 How can environmental scientists and engineers use the increasing amount of available data to enhance our understanding of planet Earth its systems and processes This book describes various potential approaches based on artificial intelligence AI techniques including neural networks decision trees genetic algorithms and fuzzy logic Part I contains a series of tutorials describing the methods and the important considerations in applying them In Part II many practical examples illustrate the power of these techniques on actual environmental problems International experts bring to life ways to apply AI to problems in the environmental sciences While one culture entwines ideas with a thread another links them with a red line Thus a red thread ties the book together weaving a tapestry that pictures the natural data driven AI methods in the light of the more traditional modeling techniques and demonstrating the power of these data based methods

**Research Techniques in Animal Ecology** Luigi Boitani, Todd Fuller, 2000-06-01 The present biodiversity crisis is rife with opportunities to make important conservation decisions however the misuse or misapplication of the methods and techniques of animal ecology can have serious consequences for the survival of species Still there have been relatively few critical reviews of methodology in the field This book provides an analysis of some of the most frequently used research techniques in animal ecology identifying their limitations and misuses as well as possible solutions to avoid such pitfalls In the process contributors to this volume present new perspectives on the collection analysis and interpretation of data

Research Techniques in Animal Ecology is an overarching account of central theoretical and methodological controversies in the field rather than a handbook on the minutiae of techniques. The editors have forged comprehensive presentations of key topics in animal ecology such as territory and home range estimates, habitation evaluation, population viability analysis, GIS mapping and measuring the dynamics of societies. Striking a careful balance, each chapter begins by assessing the shortcomings and misapplications of the techniques in question, followed by a thorough review of the current literature and concluding with possible solutions and suggested guidelines for more robust investigations. *General Technical Report RMRS*, 1998

*Quantitative Analysis of Marine Biological Communities* Gerald J. Bakus, 2007-01-22. Quantitative methods specifically tailored for the marine biologist. While there are countless texts published on quantitative methods and many texts that cover quantitative terrestrial ecology, this text fills the need for the special quantitative problems confronting marine biologists and biological oceanographers. The author combines common quantitative techniques with recent advances in quantitative methodology and then demonstrates how these techniques can be used to study marine organisms, their behaviors, and their interactions with the environment. Readers learn how to better design experiments and sampling, employ sophisticated mathematical techniques, and accurately interpret and communicate the results. Most of this text is written at an introductory level, with a few topics that advance to more complex themes. Among the topics covered are plot/plotless sampling, biometrics, experimental design, game theory, optimization, time trends, modeling, and environmental impact assessments. Even readers new to quantitative methods will find the material accessible, with plenty of features to engage their interest, promote learning, and put their knowledge into practice. One or more examples are provided to illustrate each individual quantitative technique presented in the text. The accompanying CD-ROM features two multimedia programs: several statistical programs help to run complex statistical programs, and additional information amplifying topics covered in the text. References lead readers to additional information to pursue individual topics in greater depth. *Quantitative Analysis of Marine Biological Communities* with its extensive use of examples is ideal for undergraduate and graduate students in marine biology. Marine biologists, regardless of their level of experience, will also discover new approaches to quantitative analysis tailored to the particular needs of their field.

**Carnivore Ecology and Conservation** Luigi Boitani, Roger A. Powell, 2012-01-12. Animals that must hunt and kill for at least part of their living are inherently interesting to many people, and the role that carnivores play in biological communities attracts interest from ecologists and conservation biologists. Conflicts with human activities stimulate continual debates about the management of carnivore populations, and throughout the world, people seek workable solutions for human carnivore coexistence. This concise yet authoritative handbook describes research methods and techniques for the study and conservation of all terrestrial carnivore species. Particular attention is paid to techniques for managing the human carnivore interface. Descriptions of the latest methodologies are supported by references to case studies, whilst dedicated boxes are used to illustrate how a technique is applied to a specific land cover.

type species or particular socio economic context The book describes the most recent advances in modelling the patterns of animal distributions movements and use of land cover types as well as including the most efficient methods to trap handle and mark carnivores Carnivores are biogeographically diverse and whilst extensive scientific research has investigated many aspects of carnivore biology not all species have been equally covered This book is unique in its intention to provide practical guidance for carrying out research and conservation of carnivores across all species and areas of the world *Ecology* Charles Krebs,2009-12-17
