Mental Capital and Wellbeing Cary L. Cooper, Usha Goswami, Barbara J. Sahakian, 2009-08-18 This major new reference presents The Foresight Mental Capital and Wellbeing Project a UK Government project in the Government Office for Science. It offers a comprehensive exploration of how mental capital and wellbeing operate over the lifespan, how experiences in the family, in school, at work and following retirement augment or reduce mental capital and wellbeing and the impact that this has for the individual and for the welfare and economic progress of the nation. Mental Capital and Wellbeing comprises a series of scientific reviews written by leading international scientists and social scientists in the field. The reviews undertake systematic analyses of the evidence base surrounding five key themes on which they propose future policies will have to be based. An internationally renowned team of Editors introduce each theme and draw together conclusions in terms of both policy and practice.

Section 1 Mental Capital and Wellbeing Through Life Mental capital refers to the totality of an individual's cognitive and emotional resources including their cognitive capability, flexibility and efficiency of learning, emotional intelligence and resilience in the face of stress. The extent of an individual's resources reflects his or her basic endowment (e.g. genes and early biological programming) and experiences (e.g. education) which take place throughout the life course. This section presents the very latest on the science of mental capital throughout life.

Section 2 Learning Through Life provides a coherent overview of a fast moving and complex field of policy and practice. Educational attainment has a considerable impact on physical and mental wellbeing both directly and indirectly by enabling people better to achieve their goals. The ability to continue learning throughout the lifespan is critical to a successful and rewarding life in contemporary societies.

Section 3 Mental Health and Ill Health draws together the most recent evidence about positive mental health as well as a range of mental disorders to consider their importance to the population and economy in terms of prevalence and disability and the wider burden on society.

Section 4 Wellbeing and Work It is estimated that 13 million working days are lost through stress each year costing the economy over 3.7 billion per annum. This theme explores those drivers that influence the nature and structure of work and the impact this has on employee wellbeing.

Section 5 Learning Difficulties This theme provides a cutting edge picture of how recent insights from genetics, cognitive and neuroscience improve our understanding of learning difficulties such as dyslexia, dyscalculia and attention deficit hyperactivity disorder. Reviews focus on how current research can contribute to early diagnosis and improved intervention.

Mental Arithmetic Key Stage 2 Liz Hopkins, 1998 This photocopiable resource for Key Stage 2 is divided into two main parts The first covers the important areas of mental maths such as the four rules fractions decimals money and time

and the second part presents associated topics to enable pupils to employ mental skills in contexts such as shape and measures The work is at two levels of difficulty National Curriculum Level 3 and Levels 4 5 *Children's Mathematics* Elizabeth Carruthers, Maulfry Worthington, 2006-08-07 In Case Study 5 a grassroots Children's Mathematics Network group the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children's mathematical thinking Another significant feature of this initiative is its focus on careful consideration and analysis of children's mathematics and the ways in which professionals can support and encourage the children's mathematical thinking and reasoning The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age Researching Effective CPD in Mathematics Education RECME project NCETM 2009 The review also plays great score by play based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism Section 115 features children's mathematical graphics and emphasises The role of mark making in children's cognitive development is set out in the taxonomy Carruthers and Worthington 2006 The report recommends that local authorities leaders managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes The Williams Maths Review DCSF 2008 At the very heart of the success of the book is the authors ability to see mathematics through young children's eyes by listening to and reflecting on the constant efforts made by children to make sense of their world This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout If you want to expand your understanding upwards and outwards then get a copy soon Times Educational Supplement I first read *Children's Mathematics Making Marks Making Meaning* a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers I'm sure you will find it compelling reading too I think it has the potential to change in a fundamental way how we think about early mathematical development Lynne McClure Editor Math Coordinator's File Mathematics Association In their exceptionally readable and informative book *Children's Mathematics Making Marks Making Meaning* Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH This book draws on the authors many years of teaching children aged three to eight years and also on their

extensive research with children in the home nursery and school The authors explain the development and range of young children s mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children s own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC s 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics **Concept-Based Mathematics** Jennifer T.H.

Wathall,2016-01-14 Give math students the connections between what they learn and how they do math and suddenly math makes sense If your secondary school students are fearful of or frustrated by math it s time for a new approach When you teach concepts rather than rote processes you help students discover their own natural mathematical abilities This book is a road map to retooling how you teach math in a deep clear and meaningful way to help students achieve higher order thinking skills Jennifer Wathall shows you how to plan units engage students assess understanding incorporate technology and there s even a companion website with additional resources **Ganit Mathematics** □ 7 Lata Wishram, GANIT MATHEMATICS

series consists of ten textbooks two textbooks for Primer A and B eight textbooks for classes 1 8 This series is strictly bases on the syllabus prescribed by the Council for the Indian School Certificate The series has been developed to guide the young minds to observe and experience mathematics all around them Each concept has been related to everyday life in order to develop a spirit of curiosity and discovery Concepts are gradually built up with easy to follow steps and plenty of examples

The British National Bibliography Arthur James Wells,2009 *Numerical Development - From cognitive functions to neural underpinnings* Korbinian Moeller,Elise Klein,Klaus F Willmes - von Hinckeldey,Karin Kucian,2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical

competencies develop and how this development is associated with neural changes as well. In the end, this knowledge might also lead to a better understanding of the reasons for atypical numerical development, which often has grave consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities. Therefore, this Research Topic deals with all aspects of numerical development, findings from behavioural performance to underlying neural substrates, from cross-sectional to longitudinal evaluations from healthy to clinical populations. To this end, we included empirical contributions using different experimental methodologies but also theoretical contributions, review articles or opinion papers.

Primary Mathematics for Trainee Teachers Marcus Witt, 2014-11-19. With chapter sequencing following the new Curriculum, this book supports trainee Primary school teachers to make use of the opportunities presented in the new National Curriculum for effective and engaging Mathematics teaching. Covering all of the areas of the new Curriculum for primary mathematics and offering insight into effective teaching, this book helps students connect what they need to teach with how it can be taught. Exploring opportunities in the new curriculum for creative and imaginative teaching, it shows readers how to capitalize on opportunities to develop children's reasoning and problem-solving skills. It explores how to make links between mathematics and children's lived experiences to enhance their learning and enables trainees to develop an ability to plan with discernment, making the most of existing thinking and research as well as building confidence in adapting and customizing ideas. Includes the full National Curriculum Programme of Study for Maths key stages 1 and 2 as a useful reference for trainee teachers.

Other books in this series include *Primary English for Trainee Teachers* and *Introducing Neuropsychology* John Stirling, Rebecca Elliott, 2010-10-18. *Introducing Neuropsychology* investigates the functions of the brain and explores the relationships between brain systems and human behaviour in a user-friendly textbook that draws on both established findings and cutting-edge research.
