Massachusetts Regulations held by the Social Law Library of Massachusetts as of January 2020 *Multisensory and sensorimotor interactions in speech perception* Kaisa Tiippana, Jean-Luc Schwartz, Riikka Möttönen, 2015-06-26 Speech is multisensory since it is perceived through several senses Audition is the most important one as speech is mostly heard The role of vision has long been acknowledged since many articulatory gestures can be seen on the talker's face Sometimes speech can even be felt by touching the face The best known multisensory illusion is the McGurk effect where incongruent visual articulation changes the auditory percept The interest in the McGurk effect arises from a major general question in multisensory research How is information from different senses combined Despite decades of research a conclusive explanation for the illusion remains elusive This is a good demonstration of the challenges in the study of multisensory integration Speech is special in many ways It is the main means of human communication and a manifestation of a unique language system It is a signal with which all humans have a lot of experience We are exposed to it from birth and learn it through development in face to face contact with others It is a signal that we can both perceive and produce The role of the motor system in speech perception has been debated for a long time Despite very active current research it is still unclear to which extent and in which role the motor system is involved in speech perception Recent evidence shows that brain areas involved in speech production are activated during listening to speech and watching a talker's articulatory gestures Speaking involves coordination of articulatory movements and monitoring their auditory and somatosensory consequences How do auditory visual somatosensory and motor brain areas interact during speech perception How do these sensorimotor interactions contribute to speech perception It is surprising that despite a vast amount of research the secrets of speech perception have not yet been solved The multisensory and sensorimotor approaches provide new opportunities in solving them Contributions to the research topic are encouraged for a wide spectrum of research on speech perception in multisensory and sensorimotor contexts including novel experimental findings ranging from psychophysics to brain imaging theories and models reviews and opinions Electronic Services: Concepts, Methodologies, Tools and Applications Management Association, Information Resources, 2010-05-31 With the increasing reliance on digital means to transact goods that are retail and communication based e services continue to develop as key applications for business finance industry and innovation Electronic Services Concepts Methodologies Tools and Applications is an all inclusive research collection covering the latest studies on the consumption delivery and availability of e services This multi volume book contains over 100 articles making it an essential reference for the evolving e services discipline **Comprehensive Nuclear Materials** ,2020-07-22 Materials in a nuclear environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very different from conventional materials This is evident for the four major technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER

fusion reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation Comprehensive Nuclear Materials Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues Serves as an excellent entry point for students and researchers new to the field
