The Constitution in the Classroom Stu Woolman,Brahm Fleisch,2009 About the publication The law on education and educational practices in South Africa would exhaust the capacity of any meaningful monograph Instead the authors of this book engage six discrete topics that refl ect the broader currents and conflicts in South African education debates a school choice b school fees c the right to an adequate basic education d single medium public schools e school governing bodies and f independent schools The book has two further aims First To move beyond the debates taking place separately in the education policy community and the legal academy and to demonstrate how these disciplines working in concert with each other can advance our understanding of law and education in South Africa Second To show that the ANC s complex education agenda must mirror the egalitarian utilitarian democratic and communitarian commitments found within the Constitution How these competing political claims refl ected in our basic law play themselves out in the enabling education legislation the case law and government education policy frames each topic assayed in this work About the editor Stu Woolman is the Academic Director at the South Africa Institute for Advanced Constitutional Public Human Rights and International Law Brahm Fleisch is Associate Professor in the Division of Education Leadership and Policy Studies in Wits School of Education

Curricula, Examinations, and Assessment in Secondary Education in Sub-Saharan Africa World Bank,2008-02-15 Economic and social changes fast evolution of technology and the growing importance of Internet services and international communications all these require secondary education providers to adapt what is taught and learned in schools However in Africa the content of secondary curricula is in most cases ill adapted to 21st century challenges where young people are mobile have access to more and instant information and face health threats such as HIV AIDS In addition implementation problems exist and the time for instruction is often much less then what is required by the prescribed secondary curriculum In Africa there is a need to develop a secondary education curriculum adapted to the local economic and social environment but with international comparable performance indicators This study analyzes that challenge the quality of curricula and assessment and their development processes in secondary education in Africa against the background of existing contexts conditions and ambitions on the one hand and current pedagogical thinking on the other

Forgasz, Joanne Rossi Becker, Kyeonghwa Lee, 2010-06-01 Why a book on gender issues in mathematics in the 21st century Several factors have influenced the undertaking of this project by the editors First an international volume focusing on gender and mathematics has not appeared since publication of papers emerging from the 1996 International Congress on Mathematical Education Keitel 1998 Surely it was time for an updated look at this critical area of mathematics education Second we have had lively discussion and working groups on gender issues at conferences of the International Group for the Psychology of Mathematics Education PME for the past four years sessions at which stimulating and ground breaking research has been discussed by participants from many different countries Some publication seemed essential to share this new knowledge emerging from a wider variety of countries and from different cultural perspectives Third some western countries such as Australia and the USA have experienced in recent years a focus on the boy problem with an underlying assumption that issues of females and mathematics have been solved and are no longer worthy of interest Thus it seemed timely to look more closely at the issue of gender and mathematics internationally When the idea for this volume first emerged invitations were issued to those regularly attending the working and discussion groups at PME Potential authors were charged to focus on gender issues in mathematics and were given wide scope to hone in on the issues that were central to their own research efforts or were in receipt or in need of close attention in their own national or regional contexts
