Abawajy,2015-01-02 This volume provides challenges and Opportunities with updated in depth material on the application of Big data to complex systems in order to find solutions for the challenges and problems facing big data sets applications Much data today is not natively in structured format for example tweets and blogs are weakly structured pieces of text while images and video are structured for storage and display but not for semantic content and search Therefore transforming such content into a structured format for later analysis is a major challenge Data analysis organization retrieval and modeling are other foundational challenges treated in this book The material of this book will be useful for researchers and practitioners in the field of big data as well as advanced undergraduate and graduate students Each of the 17 chapters in the book opens with a chapter abstract and key terms list The chapters are organized along the lines of problem description related works and analysis of the results and comparisons are provided whenever feasible

The Pre-Kernel as a Tractable Solution for Cooperative Games Holger Ingmar Meinhardt,2013-10-23 This present book provides an alternative approach to study the pre kernel solution of transferable utility games based on a generalized conjugation theory from convex analysis Although the pre kernel solution possesses an appealing axiomatic foundation that lets one consider this solution concept as a standard of fairness the pre kernel and its related solutions are regarded as obscure and too technically complex to be treated as a real alternative to the Shapley value Comprehensive and efficient computability is widely regarded as a desirable feature to qualify a solution concept apart from its axiomatic foundation as a standard of fairness We review and then improve an approach to compute the pre kernel of a cooperative game by the indirect function The indirect function is known as the Fenchel Moreau conjugation of the characteristic function Extending the approach with the indirect function we are able to characterize the pre kernel of the grand coalition simply by the solution sets of a family of quadratic objective functions
