

# The States of Matter

Teacher: Melissa Winfield  
Content Area Subject: Science  
Curriculum Area: Physical Science (Matter)  
Grade Level: 5/6 (special ed)

National Learning Standard:

## NS.5-8.2 PHYSICAL SCIENCE

As a result of their activities in grades 5-8, all students should develop an understanding

- Properties and changes of properties in matter
- Motions and forces
- Transfer of energy

Lesson Objectives:

1. The student will be able to recognize that matter is anything that has mass and takes up space.
2. The student will be able to conclude that an object's physical properties can be used to identify it.

**Materials:** Smartboard, Computer, 1-2 different items for each state of matter (solid, liquid, gas- ex: balloon filled with helium, pencil, water, etc...)

**Procedures:**

1. The teacher will start the lesson by reviewing the term matter and its three states. The teacher will model and categorize various physical examples of each property and initiate the creation of a list. Next, the teacher will ask for further examples from students and add their examples to the list as well.

**Lesson Planning and Illustrative Lesson Plan** John McFarland Foote, 1926      **Concepts of Earth Science & Chemistry Parent Lesson Plan** John Hudson Tiner, 2013-08-26

**Concepts of Earth and Chemistry Course Description** This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student. Materials for each semester are independent of one another to allow flexibility.

**Semester 1 Earth** Blending a creationism perspective of history with definitions of terms and identification of famous explorers/scientists etc. This book gives students an excellent initial knowledge of people and places, encouraging them to continue their studies in depth.

**Semester 2 Chemistry** Chemistry is an amazing branch of science that affects us every day, yet few people realize it or even give it much thought. Without chemistry, there would be nothing made of plastic; there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information.

**Concepts of Mathematics and Physics Course Description** This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student. Materials for each semester are independent of one another to allow flexibility.

**Semester 1 Mathematics** Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics.

**Semester 2 Physics** Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia firsthand during fun and informative experiments. Exploring the World of Physics is a great tool for students who want to have a deeper understanding of the important and interesting ways that physics affects our lives.

**Proceedings ...** ,1929 **Connecting Physics Education Research and Practice** Italo Testa,Marisa Michelini,Salvatore Esposito,2025-08-15 This book presents a selection of the most recent research results from the Italian physics education research community aimed at enhancing the teaching and learning of physics The motivation for this publication arises from the lack of a comprehensive reference for teachers on research results in physics education Despite various physics curriculum reform initiatives such as the introduction of modern physics into high school curricula their effectiveness in improving the quality of physics teaching in schools has been limited The book offers a contextualized view of the main topics in physics education along with a

comprehensive overview of the current challenges faced by physics education in Italy and abroad. It also presents research findings that could potentially enhance students' learning of physics. Throughout the book, the implications of these studies are outlined, acknowledging issues and knowledge gaps that will guide future research in physics education. Specifically, rather than covering all the contents addressed in the physics curriculum, the book presents research contributions that suggest potentially effective strategies, methods, and practices at different school levels, from primary school to secondary school and university level. Regarding physics content, the book presents teaching proposals highlighting conceptual aspects and exemplary methodologies of interpretation in physics, such as the physics of fluids and quantum mechanics. It also includes research contributions on different methods and proposals for implementing practical activities reflecting on the role of the laboratory in learning the discipline and providing examples of integrating experimental and cognitive skills. The book also addresses the role of affective variables, such as physics identity, self-efficacy, and attitudes toward physics in the learning process. Additionally, studies on teachers' professional development are presented, which can inform the design of proposals for educational paths and methods within a framework of close collaboration between schools and physics departments.
