Reuel R. Hanks, 2011-10-17 This text provides an essential reference handbook for students of geography and related social sciences. How did the Greek geographer Eratosthenes make an accurate calculation of the earth s circumference more than 1 500 years before the first voyage of Columbus to the New World? What are the green belts of England that dominate its rural landscape? And what is regarded as the driest continent on the planet? This handbook offers a broad coverage of terminology and concepts serving as both an encyclopedic dictionary of geography terms and an approachable overview to the human and physical aspects of world geography. Approximately 150 geographic terms and concepts are defined and discussed providing an accessible reference for anyone who requires a deeper knowledge of the language and ideas that are important to

geography as a discipline. Helpful sidebars are provided to shed light on unusual or controversial theories and concepts. All major geographic concepts and terms are addressed and comprehensively explained using examples. **Wealth, Poverty and Politics** Thomas Sowell, 2016-09-06 In *Wealth, Poverty and Politics* Thomas Sowell, one of the foremost conservative public intellectuals in this country, argues that political and ideological struggles have led to dangerous confusion about income inequality in America. Pundits and politically motivated economists trumpet ambiguous statistics and sensational theories while ignoring the true determinant of income inequality: the production of wealth. We cannot properly understand inequality if we focus exclusively on the distribution of wealth and ignore wealth production factors such as geography, demography and culture. Sowell contends that liberals have a particular interest in misreading the data and chastises them for using income inequality as an argument for the welfare state. Refuting Thomas Piketty, Paul Krugman and others on the left, Sowell draws on accurate empirical data to show that the inequality is not nearly as extreme or sensational as we have been led to believe. *Transcending partisanship through a careful examination of data, Wealth, Poverty and Politics reveals the truth about the most explosive political issue of our time.* **Empire Biota: Taxonomy and Evolution 2nd Edition**

Bernard Pelletier, 2016-02 A comprehensive account of taxonomy including historical overviews, the first cladistic analyses of bacteria based on classical evidence, the most comprehensive cladistic analyses of eukaryotes based on classical evidence, cladograms, tables and lists, descriptions of the various groups, profiles of taxonomists and coverage of classifications for lower groups, evolution and fossils with edits and a chapter on ecology and biogeography and one on geological time added.

The Political Discourse of Spatial Disparities Ferenc Gyuris, 2013-10-30 This work aims to provide unique insights into the multidisciplinary research on spatial disparities from an unconventional point of view It breaks with the conventional narrative that tends to interpret this theoretical tradition as a series of factual contributions to a better understanding of the issue Instead related theories are investigated in their political economic and social contexts and spatial disparity research is presented as a political discourse It also reveals how the propagandistic problematization or de problematization of geographical inequalities serves the substantiation of political goals while taking advantage of the legitimate authority of science and the image of scientific objectivity The book explains how the discourse has functioned from 19th century social physics over the Cold War period up to Marxist geographies of the current neoliberal age and in what way and to what extent political considerations prevent related concepts producing objective knowledge about the complex phenomenon of spatial inequalities
