Fabrication of adaptive head lamps for four wheelers

1. Fabrication of new type of motorized wheel chair and personal vehicle for handicapped people
2. Fabrication of PCB drilling machine
3. Fabrication of automated industrial bag opener
4. Fabrication of adaptive braking vehicle
5. Fabrication of versatile bench for home gym
6. Fabrication of portable device for back exercise
7. Fabrication of future car
8. Fabrication of Automated four bar mechanism
9. Fabrication of coconut tree Sprayer
10. Fabrication of water level sensing crane for motor pump
11. Fabrication of solar irrigation system
12. Fabrication of solar powered tree leaf cutting machine
13. Fabrication of water powered water lifting machine
14. Fabrication of two wheeler water lifting pump
15. Fabrication of water heater using home refrigerator
16. Fabrication of solar water heater using parabolic solar collector
17. Fabrication of thermal power plant using solar energy
18. Fabrication of composite solar cooker
19. Fabrication of solar water heater
20. Fabrication of electricity generation unit using steam energy
21. Fabrication of remote controlled hazardous material handling system
22. Fabrication of industrial temperature analyzing robot
23. Fabrication of Fire fighting robot
24. Fabrication of metal / mines detector robot
25. Fabrication of voice controlled material handling robot
26. Fabrication of special robotic vehicle for bomb defusing squad

Office of the Assistant Secretary of the Army (Civil Works), 2015 *DiQuMaSPAB* Francesco Tornabene, Nicholas Fantuzzi, Michele Baccocchi, 2018-02-09 The main aim of this book is to show the features of DiQuMaSPAB so ware through the description of its graphical interface by giving special emphasis to all those aspects implemented in the code DiQuMaSPAB acronym of Differential Quadrature for Mechanics of Anisotropic Shells Plates Arches and Beams is a computational code which can be used for the numerical analysis of doubly curved shells made of innovative materials using the Generalized Differential Quadrature GDQ and the Generalized Integral Quadrature GIQ methods The software can investigate the mechanical behavior of these structures through different approaches and structural theories In particular this code allows considering a kinematic expansion characterized by different degrees of freedom for the Equivalent Single Layer ESL theories and for each layer when the Layer Wise LW approach is taken into account As far as the materials are concerned it is possible to consider different lamination schemes as well as various distributions of the volume fraction of the constituents for those layers that vary their mechanical properties along the thickness In addition the software analyzes structures with variable thickness and characterized by variable mechanical properties that can change point by point A finite element formulation is also available to investigate the mechanical behavior of plane structures characterized by irregular domains and mechanical discontinuities *Anisotropic Doubly-Curved Shells* Francesco Tornabene, Michele Baccocchi, 2019-11-01 This book aims to present in depth several Higher order Shear Deformation Theories HSDTs by means of a unified approach for the mechanical analysis of doubly curved shell structures made of anisotropic and composite materials In particular the strong and weak formulations of the corresponding governing equations are discussed and illustrated The approach presented in this volume is completely general and represents a valid tool to investigate the structural behavior of many arbitrarily shaped structures An isogeometric mapping procedure is also illustrated to this aim Special attention is given also to advanced and innovative constituents such as Carbon Nanotubes CNTs Variable Angle Tow VAT composites and Functionally Graded Materials FGMs In addition several numerical applications are developed to support the theoretical models Accurate efficient and reliable

numerical techniques able to approximate both derivatives and integrals are presented which are respectively the Differential Quadrature DQ and Integral Quadrature IQ methods Finally two numerical techniques named Strong Formulation Finite Element Method SFEM and Weak Formulation Finite Element Method WFEM are developed to deal with multi element domains characterized by arbitrary shapes and discontinuities

**Fusion of Hard and Soft Control Strategies for the Robotic Hand** Cheng-Hung Chen, Desineni Subbaram Naidu, 2017-09-13 An in depth review of hybrid control techniques for smart prosthetic hand technology by two of the world's pioneering experts in the field Long considered the stuff of science fiction a prosthetic hand capable of fully replicating all of that appendage's various functions is closer to becoming reality than ever before This book provides a comprehensive report on exciting recent developments in hybrid control techniques one of the most crucial hurdles to be overcome in creating smart prosthetic hands Coauthored by two of the world's foremost pioneering experts in the field Fusion of Hard and Soft Control Strategies for Robotic Hand treats robotic hands for multiple applications It begins with an overview of advances in main control techniques that have been made over the past decade before addressing the military context for affordable robotic hand technology with tactile and or proprioceptive feedback for hand amputees Kinematics homogeneous transformations inverse and differential kinematics trajectory planning and dynamic models of two link thumb and three link index finger are discussed in detail The remainder of the book is devoted to the most promising soft computing techniques particle swarm optimization techniques and strategies combining hard and soft controls In addition the book Includes a report on exciting new developments in prosthetic robotic hand technology with an emphasis on the fusion of hard and soft control strategies Covers both prosthetic and non prosthetic hand designs for everything from routine human operations robotic surgery and repair and maintenance to hazardous materials handling space applications explosives disposal and more Provides a comprehensive overview of five fingered robotic hand technology kinematics dynamics and control Features detailed coverage of important recent developments in neuroprosthetics Fusion of Hard and Soft Control Strategies for Robotic Hand is a must read for researchers in control engineering robotic engineering biomedical sciences and engineering and rehabilitation engineering

*Handbook of Pharmaceutical Granulation Technology* Dilip M. Parikh, 2021-05-11 This fully revised edition of Handbook of Pharmaceutical Granulation Technology covers the rapid advances in the science of agglomeration process control process modelling scale up emerging particle engineering technologies along with current regulatory changes presented by some of the prominent scientist and subject matter experts around the globe Learn from more than 50 global subject matter experts who share their years of experience in areas ranging from drug delivery and pharmaceutical technology to advances in nanotechnology Every pharmaceutical scientist should own a copy of this fourth edition resource Key Features Theoretical discussions covering granulation and engineering perspectives Covers new advances in expert systems process modelling and bioavailability Chapters on emerging technologies in particle engineering Updated Current research and developments
