Mechanics Of Materials By Ferdin Beer 6th Edition:

Mechanics of Materials Ferdinand Pierre Beer, E. Russell Jr Johnston, John T. Dewolf, 2009 Overview This text is designed for the first course in mechanics of materials or strength of materials offered to engineering students in the sophomore or junior year The main objective is to help develop in the engineering student the ability to analyse a given problem in a simple and logical manner and to apply to its solution a few fundamental and well understood principles In this text the study of the mechanics of materials is based on the understanding of a few basic concepts and on the use of simplified models This approach makes it possible to develop all the necessary formulas in a rational and logical manner and to clearly indicate the conditions under which they can be safely applied to the analysis and design of actual engineering structures and machine components Features New and revised problems Hands On Mechanics Helps the professor build in class experiments that demonstrate complicated topics in the text The experiments and instructions are posted on www.handsonmechanics.com McGraw Hill's ARIS Assessment Review and Instruction System A complete online tutorial electronic homework and course management system designed for greater ease of use than any other system available For students ARIS contains self study tools such as animation and interactive quizzes and it enables students to complete and submit their homework online For instructors ARIS provides teaching resources online and allows them to create or edit problems from the question bank import their own contents and grade and report easy to assign homework quizzes and tests ARIS is free for instructors while students can purchase access from the bookstore or the ARIS website See <http://mharis.mhhe.com> for details

Essential Mechanics - Statics and Strength of Materials with MATLAB and Octave P. Venkataraman, 2020-01-07 Essential Mechanics Statics and Strength of Materials with MATLAB and Octave combines two core engineering science courses Statics and Strength of Materials in mechanical civil and aerospace engineering It weaves together various essential topics from Statics and Strength of Materials to allow discussing structural design from the very beginning The traditional content of these courses are reordered to make it convenient to cover rigid body equilibrium and extend it to deformable body mechanics The book covers the most useful topics from both courses with computational support through MATLAB Octave The traditional approach for engineering content is emphasized and is rigorously supported through graphics and analysis Prior knowledge of MATLAB is not necessary Instructions for its use in context is provided and explained It takes advantage of the numerical symbolic and graphical capability of MATLAB for effective problem solving This computational ability provides a natural procedure for What if exploration that is important for design The book also emphasizes graphics to understand learn and explore design The idea for this book the organization and the flow of content is original and new The integration of computation and the marriage of analytical and computational skills is a new valuable experience provided by this book Most importantly the book is very interactive with respect to the code as it appears along with the analysis
