The Value of Offshore Banking to the Global Financial System John E. Baiden, The Bank-Business Relationship Paola Brighi, Maurizio Mussoni, 2025-09-07 This book investigates the factors driving the transformation of banks credit function and the evolving financial requirements of corporations with a particular focus on the dynamics of bank business relationships It addresses the impact of inherent market failures in the banking sector notably information asymmetries and credit rationing on these relationships and their influence on corporate decisions regarding funding sources The book also examines the competitive pressure faced by firms that adopt new entrepreneurial models necessitating innovative strategies in financial management and evaluates the adaptive responses banks can employ to meet emerging financial needs Additionally it analyzes how banking regulation influences lending decisions especially under conditions marked by information asymmetries and financial constraints A distinctive feature of the book is its comprehensive analysis of the motivations underlying recent transformations within the banking sector These transformations stem from both endogenous processes such as the classification of financial and banking services as credence goods and the related regulatory implications and exogenous factors including regulatory reforms and the ongoing transition toward sustainability and digitalization This book will appeal to academic scholars practitioners and policymakers in banking and risk management
