Observations on the Behavior, Ecology, and Biology of Sharks and Rays Austin Gallagher,Emily Lester ,Brendan Shea,2025-08-28 Sharks and rays are a group of ancient ecologically important and highly threatened fishes Their large size high mobility and diversity allow for the assessment of the structure and function of large expanses of the ocean while making them a unique model for assessing how species respond to human induced changes such as climate change Despite the notion that many aspects of their biology and ecology remain poorly understood access to this information has never been greater due to the rapid development of emerging technologies and approaches to study sharks and rays in virtually all areas of the ocean from shallow reefs to deep trenches As the global research effort on sharks and rays continues to expand annually we are also increasing the likelihood of making novel behavioral physiological or molecular discoveries as is the potential to expand or refine known correlates of their biology or ecology These exciting observations shed light on future research efforts and aid in adaptive management and conservation *Conservation Drones* Serge A.
