watch by it someone always comes to take it away But who exactly is that someone And why is he or she so unknown In Picking Up the anthropologist Robin Nagle introduces us to the men and women of New York City's Department of Sanitation and makes clear why this small army of uniformed workers is the most important labor force on the streets Seeking to understand every aspect of the Department's mission Nagle accompanied crews on their routes questioned supervisors and commissioners and listened to story after story about blizzards hazardous wastes and the insults of everyday New Yorkers But the more time she spent with the DSNY the more Nagle realized that observing wasn't quite enough so she joined the force herself Driving the hulking trucks she obtained an insider's perspective on the complex kinships arcane rules and obscure lingo unique to the realm of sanitation workers Nagle chronicles New York City's four hundred year struggle with trash and traces the city's waste management efforts from a time when filth overwhelmed the streets to the far more rigorous practices of today when the Big Apple is as clean as it's ever been An intimate look at the mostly male work force as they risk injury and endure insult while doing the city's dirty work and a fascinating capsule history of the department Publishers Weekly Nagle's passion for the subject really comes to life The New York Times Evokes the physical and psychological toll of this dangerous filthy necessary work Nature Nagle joins the likes of Jane Jacobs and Jacob Riis writers with the chutzpah to dig deep into the Rube Goldberg machine we call the Big Apple and emerge with a lyrical clear-eyed look at how it works Mother Jones

The Science Fiction Film in Contemporary Hollywood Evdokia

Stefanopoulou,2023-07-27 The Science Fiction Film in Contemporary Hollywood focuses on the American science fiction SF film during the period 2001-2020 in order to provide a theoretical mapping of the genre in the context of Conglomerate Hollywood Using a social semiotics approach in a systematic corpus of films the book argues that the SF film can be delineated by two semiotic squares the first one centering on the genre's more than human ontologies SF bodies and the second one focusing on its imaginative worlds SF worlds Based on this theoretical framework the book examines the genre in six cycles which are placed in their historical context and are analyzed in relation to cultural discourses such as technological embodiment race animal human relations environmentalism global capitalism and the techno-scientific Empire By considering these cycles which include superhero films creature films space operas among others as expressions of the genre's basic oppositions the book facilitates the comparison and juxtaposition of films that have rarely been discussed in tandem offering a new perspective on the multiple articulations of the SF film in the new millennium

China's Economic Supertrends: How China is Changing from the Inside Out to Become the World's Next Economic Superpower,

Antidumping J. Michael Finger,2025-10-01 Antidumping is a threat to the liberal trading system that post World War II Western leadership struggled courageously and effectively to create It offers a GATT legal means to destroy the GATT system leading to restrictions on more U.S. imports than even the Multi-Fibre Arrangement This book presents studies of five industries whose exports have been hard hit by antidumping actions Each of these studies avoids the legalisms and the

jargon of antidumping and answers a straightforward question was the national economic interest of either the exporting or the importing country improved by the antidumping actions that were taken The contributors not only ask questions and present viable answers but also provide a proposal that offers both consistence with GATT and good economics This book will be of interest to lawyers political scientists economists and business people It has intentionally avoided the specialized language of trade regulation so that it may be more readily accessible to anyone interested in international commercial policy

Robot Suicide Liz W. Faber,2023-05-01 In Robot Suicide Death Identity and AI in Science Fiction Liz W Faber blends

cultural studies philosophy sociology and medical sciences to show how fictional robots hold up a mirror to our cultural perceptions about suicide and can help us rethink real world policies regarding mental health For decades we've been asking whether we could make a robot live but a new question is whether a living robot could make itself die And if it could how might we humans react Suicide is a longstanding taboo in Western culture particularly in relationship to mental health marginalized identities and individual choice But science fiction offers us space to tackle the taboo by exploring whether and under what circumstances robots as metaphorical stand ins for humans might choose to die Faber looks at a broad range of science fiction from classics like The Terminator franchise to recent hits like C Robert Cargill's novel Sea of Rust *The Ultimate Hitchhiker's Guide* Douglas Adams, 2005 6 Science fiction romaner **Alien Listening** Daniel K. L. Chua, Alexander Rehding, 2021-09-14 An examination of NASA's Golden Record that offers new perspectives and theories on how music can be analyzed listened to and thought about by aliens and humans alike In 1977 NASA shot a mixtape into outer space The Golden Record aboard the Voyager spacecrafts contained world music and sounds of Earth to represent humanity to any extraterrestrial civilizations To date the Golden Record is the only human made object to have left the solar system Alien Listening asks the big questions that the Golden Record raises Can music live up to its reputation as the universal language in communications with the unknown How do we fit all of human culture into a time capsule that will barrel through space for tens of thousands of years And last but not least Do aliens have ears The stakes could hardly be greater Around the extreme scenario of the Golden Record Chua and Rehding develop a thought provoking philosophically heterodox and often humorous Intergalactic Music Theory of Everything a string theory of communication an object oriented ontology of sound and a Penelopean model woven together from strands of music and media theory The significance of this exomusicology like that of the Golden Record ultimately takes us back to Earth and its denizens By confronting the vast temporal and spatial distances the Golden Record traverses the authors take listeners out of their comfort zone and offer new perspectives in which music can be analyzed listened to and thought about by aliens and humans alike One is Never Alone with a Rubber Duck Marillette van der Colff, 2010-08-11 What do existential elevators sentient mattresses paranoid androids humans and other aliens have in common For one thing they want answers The fact yes fact that there are no answers except perhaps for 42 causes some humans and other aliens to face this empty madness we call life with Sisyphus like defiance Others choose to sulk or skulk or annihilate themselves Another thing these creatures have in common is that they are all born mad and some remain so One is never alone with a rubber duck explores the premise that Douglas Adams's Hitchhiker Series is not merely characterised by light hearted comedy but is underpinned by intricate philosophical ideas especially those of twentieth century Existentialism and the related notion of absurdity It also investigates the interlaced functions of Adams's fantasy and landscapes of alterity and considers the ambiguous concept of madness as subjective reality Concepts related to alterity such as simulation the structure of reality dreaming and parallel universes are investigated as

part of Adams's fantastic story space. In a science-fictional sense, Adams's aliens satirise the human condition and the monstrosities that lurk at the heart of twentieth-century society. **Upgrade Me** Brian Clegg, 2008-07-22 Biologically human beings haven't changed in 100 000 years but thanks to our amazing brains we can upgrade ourselves to add capabilities that took other creatures millions of years to evolve. Thanks to this unnatural evolution we are already Human 2.0. In the effort to stay alive, reproduce and make more of brains, we have transformed ourselves. Now with a better understanding of the mechanisms of the body, cloning, gene therapy, bionics and other technologies, our rate of change is getting ever faster. This process of upgrading is nothing new. It has been around for millennia and it raises some provocative questions: What will the future hold? Will our drive to upgrade continue to give positive benefits or will it result in destruction? Where is our evolutionary survival heading? Sure to cause much debate. **UPGRADE ME** is science journalist Brian Clegg's ambitious and brilliant account of humanity's need to upgrade. *The Hebrew Bible and Philosophy of Religion* Jaco Gericke, 2012-11-01 This study pioneers the use of philosophy of religion in the study of the Hebrew Bible. After identifying the need for a legitimate philosophical approach to Israelite religion, the volume traces the history of interdisciplinary relations and shows how descriptive varieties of philosophy of religion can aid the clarification of the Hebrew Bible's own metaphysical, epistemological and moral assumptions. Two new interpretative methodologies are developed and subsequently applied through an introduction to what the biblical texts took for granted about the nature of religious language, the concept of deity, the properties of Yhwh, the existence of gods, religious epistemology and the relation between religion and morality. **The Social Organism** Oliver Lockett, Michael Casey, 2016-11-15 A must-read for business leaders and anyone who wants to understand all the implications of a social world. Bob Iger, Chairman and Chief Executive Officer of The Walt Disney Company. From tech visionaries, Oliver Lockett and Michael J Casey, a groundbreaking must-read theory of social media: how it works, how it's changing human life and how we can master it for good and for profit. In barely a decade, social media has positioned itself at the center of twenty-first-century life. The combined power of platforms like Facebook, Twitter, Instagram, Snapchat and Vine have helped topple dictators and turned anonymous teenagers into celebrities overnight. In the social media age, ideas spread and morph through shared hashtags, photos and videos, and the most compelling and emotive ones can transform public opinion in mere days and weeks, even attitudes and priorities that had persisted for decades. How did this happen? The scope and pace of these changes have left traditional businesses and their old-guard marketing gatekeepers bewildered. We simply do not comprehend social media's form, function and possibilities. It's time we did. In *The Social Organism*, Lockett and Casey offer a revolutionary theory: social networks to an astonishing degree mimic the rules and functions of biological life. In sharing and replicating packets of information, known as memes, the world's social media users are facilitating an evolutionary process just like the transfer of genetic information in living things. Memes are the basic building blocks of our culture, our social DNA. To master social media and to make online content that impacts the world, you

must start with the Social Organism With the scope and ambition of The Second Machine Age and James Gleick s The Information The Social Organism is an indispensable guide for business leaders marketing professionals and anyone serious about understanding our digital world a guide not just to social media but to human life today and where it is headed next

Natural General Intelligence Christopher Summerfield, 2023 Since the time of Turing computer scientists have dreamed of building artificial general intelligence AGI a system that can think learn and act as humans do Over recent years the remarkable pace of progress in machine learning research has reawakened discussions about AGI But what would a generally intelligent agent be able to do What algorithms architectures or cognitive functions would it need To answer these questions we turn to the study of natural intelligence Humans and many other animals have evolved precisely the sorts of generality of function that AI researchers see as the defining hallmark of intelligence The fields of cognitive science and neuroscience have provided us with a language for describing the ingredients of natural intelligence in terms of computational mechanisms and cognitive functions and studied their implementation in neural circuits Natural General Intelligence describes the algorithms and architectures that are driving progress in AI research in this language by comparing current AI systems and biological brains side by side In doing so it addresses deep conceptual issues concerning how perceptual memory and control systems work and discusses the language in which we think and the structure of our knowledge It also grapples with longstanding controversies about the nature of intelligence and whether AI researchers should look to biology for inspiration Ultimately Summerfield aims to provide a bridge between the theories of those who study biological brains and the practice of those who are seeking to build artificial brains
