***Nucleic Acids*** Irshad Ul Haq Bhat, Zakia Khanam, 2023-08-20 *Nucleic Acids A Natural Target for Newly Designed Metal Chelate Based Drugs* discusses how human diseases are becoming more costly to treat along with updates on the resistance offered by disease causing agents. The abundance of drugs in the market has provided great relief to patients but side effects can destroy the immune system of the body. Patients need to boost their immune system and at the same time cover expenses incurred to cure disease. Thus a paradigm shift is needed to design a drug molecule with low cost and easy availability. Metal complexes can be a great example of such a shift as metal ions are components of biological molecules and can achieve good binding capability to specific targets while not allowing them to damage healthy cell system. Therefore in this book a comprehensive compilation of recent data is provided including the structural elucidation of metal complexes by advanced techniques and the binding pattern of metal complexes with specific targets. Focuses on recent advances and methods adopted for generating new metal based molecules and their interactions with biomolecules especially nucleic acids. Addresses challenges for developing new metal based drugs. Examines advances in optical techniques for the characterization of metal based drugs.

*Anthrozoology* Geoff Hosey, Vicky Melfi, 2018-11-30

Anthrozoology the study of human animal interactions HAIs has experienced substantial growth during the past 20 years and it is now timely to synthesise what we know from empirical evidence about our relationships with both domesticated and wild animals Two principal points of focus have become apparent in much of this research One is the realisation that the strength of these attachments not only has emotional benefits for people but confers health benefits as well such that a whole area has opened up of using companion animals for therapeutic purposes The other is the recognition that the interactions we have with animals have consequences for their welfare too and thus impact on their quality of life Consequently we now study HAIs in all scenarios in which animals come into contact with humans whether as pets companions farm livestock laboratory

animals animals in zoos or in the wild This topical area of study is of growing importance for animals in animal management animal handling animal welfare and applied ethology courses and also for people within psychology anthropology and human geography at both the undergraduate and postgraduate level It will therefore be of interest to students researchers and animal managers across the whole spectrum of human animal contact      *Traditional Chinese Medicine (TCM): A multi target approach to complex cardiovascular disease - Volume I* Jing-Yan Han, Gerald A.
