Financial Services and General Government Appropriations for 2015 United States. Congress. House. Committee on Appropriations. Subcommittee on Financial Services and General Government, 2014 **Rural Electrification** Najib Altawell, James Milne, Patrice Seuwou, Luisa Sykes, 2020-12-04 Rural Electrification poses solutions to the insuperable modern challenge of providing 24/7 electricity for populations housing and territory located outside towns and cities. The book reviews the historical development of rural energy systems, their status quo, and the role of renewable and fossil-fueled solutions in delivering electricity. It addresses core issues of energy source typologies, resource deployment, fundamental challenges, and limitations, the burgeoning threat of climate change, and the role of the renewable energy transition. Chapters account for almost all forms of fuel solutions, with a focus on electrification, economics, planning, and policy, using the most cost-effective fuels and systems available. Novel approaches to address the challenges of rural electrification, including distributed generation systems, new management and ownership models, off-grid systems, and future energy technologies, are thoroughly explored. The work concludes with a comparative assessment of different energy supply technologies and scenarios, contrasting the pros and cons of fossil fuels versus renewable energy resources to achieve the goal of comprehensive rural electrification. Provides a suite of new approaches to deliver and expand electrification across challenging rural environments. Describes optimal economics, planning, and policy for electrification where there is no access to electricity. Reviews how practitioners can achieve cost reductions for rural energy supply using existing technologies. Addresses routes to power rural electrification within a transitioning energy economy while simultaneously accounting for climate change considerations. The Laws of Scientific Change Hakob Barseghyan,2015-08-17 This book systematically creates a general descriptive theory of scientific change that explains the mechanics of changes in both scientific theories and the methods of their assessment It was once believed that while scientific theories change through time their change itself is governed by a

fixed method of science Nowadays we know that there is no such thing as an unchangeable method of science the criteria employed by scientists in theory evaluation also change through time But if that is so how and why do theories and methods change Are there any general laws that govern this process or is the choice of theories and methods completely arbitrary and random Contrary to the widespread opinion the book argues that scientific change is indeed a law governed process and that there can be a general descriptive theory of scientific change It does so by first presenting meta theoretical issues divided into chapters on the scope possibility and assessment of theory of scientific change It then builds a theory about the general laws that govern the process of scientific change and goes into detail about the axioms and theorems of the theory **Basic**
