fight unaffordable housing and homelessness in Los Angeles illuminated by a new conceptual framework for studying collective action *How Civic Action Works* renews the tradition of inquiry into collective social problem solving Paul Lichterman follows grassroots activists nonprofit organization staff and community service volunteers in three coalitions and twelve organizations in Los Angeles as they campaign for affordable housing develop new housing or address homelessness Lichterman shows that to understand how social advocates build their campaigns craft claims and choose goals we need to move beyond well established thinking about what is strategic Lichterman presents a pragmatist inspired sociological framework that illuminates core tasks of social problem solving both contentious and noncontentious by grassroots and professional advocates alike He reveals that advocates distinct styles of collective action produce different understandings of what is strategic and generate different dilemmas for advocates because each style accommodates varying social and institutional pressures We see too how patterns of interaction create a cultural filter that welcomes some claims about housing problems while subordinating or delegitimizing others These cultural patterns help solve conceptual and practical puzzles such as why coalitions fragment when members agree on many things and what makes advocacy campaigns separate housing from homelessness or affordability from environmental sustainability Lichterman concludes by turning this action centered framework toward improving dialogue between social advocates and researchers Using extensive ethnography enriched by archival evidence *How Civic Action Works* explains how advocates meet the relational and rhetorical challenges of collective action

Richard Susskind, Daniel Susskind, 2022-03-31 This book predicts the decline of today s professions and introduces the people and systems that will replace them In an internet enhanced society according to Richard Susskind and Daniel Susskind we will neither need nor want doctors teachers accountants architects the clergy consultants lawyers and many others to work as they did in the 20th century The Future of the Professions explains how increasingly capable technologies from telepresence to artificial intelligence will place the practical expertise of the finest specialists at the fingertips of everyone often at no or low cost and without face to face interaction The authors challenge the grand bargain the arrangement that

grants various monopolies to today's professionals. They argue that our current professions are antiquated, opaque, and no longer affordable, and that the expertise of their best is enjoyed only by a few. In their place, they propose five new models for producing and distributing expertise in society. The book raises profound policy issues, not least about employment; they envisage a new generation of open-collared workers, and about control over online expertise, they warn of new gatekeepers in an era when machines become more capable than human beings at most tasks. With a new preface exploring recent critical developments, this updated edition builds on the authors' groundbreaking research into more than a dozen professions. Illustrated with numerous examples from each, this is the first book to assess and question the relevance of the professions in the 21st century.
