Kronos User Guide:

A User's Manual and Guide to SALT3 and SALT4 E. N. Lindner, 1984 Systems and Software Verification B. Berard, M. Bidoit, A. Finkel, F. Laroussinie, A. Petit, L. Petrucci, P. Schnoebelen, 2013-04-17 Model checking is a powerful approach for the formal verification of software When applicable it automatically provides complete proofs of correctness or explains via counter examples why a system is not correct This book provides a basic introduction to this new technique The first part describes in simple terms the theoretical basis of model checking transition systems as a formal model of systems temporal logic as a formal language for behavioral properties and model checking algorithms The second part explains how to write rich and structured temporal logic specifications in practice while the third part surveys some of the major model checkers available *Intelligent Autonomous Systems* Ulrich Rembold, 1995 This text presents the proceedings of a conference on intelligent autonomous systems Papers contribute solutions to the task of designing autonomous systems that are capable of operating independently of a human in partially structured and unstructured environments For specific application these systems should also learn from their actions in order to improve and optimize planning and execution of new tasks **Reference Guide on Understanding Common Use at Airports** Rick Belliotti, 2010 The aviation industry has seen dramatic changes in the past two decades with significant growth during the 1990s a significant industry disruptive event on September 11 2001 and an economic decline resulting in a sharp rise in fuel prices that has substantially changed the economics of airline operations and a decline in growth During this period airlines have adapted to the changes in various ways many of which have resulted in adaptability issues for airport operators thus raising the question of is there a better way to be more flexible and responsive to airline service changes in good and bad times From an airline perspective cost reduction since September 11 has been a prominent focus From an airport operator perspective adapting to and accommodating changing flight services by incumbent carriers as well as new entrant services has been a key focus In recent years offering more cost effective solutions to retain or encourage new services in the face of service reductions has become a key focus Airport operator interests in common use have been heightened by the potential for achieving a reasonable balance between airline and airport operator interests The implications of transitioning from a traditional model of airline facility use and leasing focused on dedicated facilities to common use has elicited varying and often conflicting perceptions of benefit and cost Visual Navigation Yiannis Aloimonos, 2013-05-13 All biological systems with vision move about their environments and successfully perform many tasks The same capabilities are needed in the world of robots To that end recent results in empirical fields that study insects and primates as well as in theoretical and applied disciplines that design robots have uncovered a number of the principles of navigation To offer a unifying approach to the situation this book brings together ideas from zoology psychology neurobiology mathematics geometry computer science and engineering It contains theoretical developments that will be essential in future research on the topic especially new representations of space with

less complexity than Euclidean representations possess These representations allow biological and artificial systems to compute from images in order to successfully deal with their environments In this book the barriers between different disciplines have been smoothed and the workings of vision systems of biological organisms are made clear in computational terms to computer scientists and engineers At the same time fundamental principles arising from computational considerations are made clear both to empirical scientists and engineers Empiricists can generate a number of hypotheses that they could then study through various experiments Engineers can gain insight for designing robotic systems that perceive aspects of their environment For the first time readers will find the insect vision system presented in a way that can be understood by computational scientists working in computer vision and engineering three complete working robotic navigation systems presented with all the issues related to their design analyzed in detail the beginning of a computational theory of direct perception as advocated by Gibson presented in detail with applications for a variety of problems and the idea that vision systems could compute space representations different from perfect metric descriptions and be used in robotic tasks advanced for both artificial and biological systems Fundamental Approaches to Software Engineering

Mauro Pezzè, 2003-07-01 This book constitutes the refereed proceedings of the 6th International Conference on Fundamental Approaches to Software Engineering FASE 2003 held in Warsaw Poland in April 2003 The 20 revised full papers presented together with a keynote paper were carefully reviewed and selected from 89 submissions The papers are organized in topical sections on software components mobile computing aspects and web applications software
