Learning under Resource Constraints - Discovery in Physics Katharina Morik,Wolfgang Rhode,2022-12-31 Machine Learning under Resource Constraints addresses novel machine learning algorithms that are challenged by high throughput data by high dimensions or by complex structures of the data in three volumes Resource constraints are given by the relation between the demands for processing the data and the capacity of the computing machinery The resources are runtime memory communication and energy Hence modern computer architectures play a significant role Novel machine learning

algorithms are optimized with regard to minimal resource consumption Moreover learned predictions are executed on diverse architectures to save resources It provides a comprehensive overview of the novel approaches to machine learning research that consider resource constraints as well as the application of the described methods in various domains of science and engineering Volume 2 covers machine learning for knowledge discovery in particle and astroparticle physics Their instruments e g particle detectors or telescopes gather petabytes of data Here machine learning is necessary not only to process the vast amounts of data and to detect the relevant examples efficiently but also as part of the knowledge discovery process itself The physical knowledge is encoded in simulations that are used to train the machine learning models At the same time the interpretation of the learned models serves to expand the physical knowledge This results in a cycle of theory enhancement supported by machine learning
