Allow $2\sqrt{x}$ and $2x^{\frac{1}{2}}$. B1 for $+c$, when first seen with a changed expression.	M1 A1 A1 B1 Total 4 marks

1st M1 For attempting to find critical values. Factors alone are OK for M1, $x =$ appearing somewhere for the formula and as written for completing the square 1st A1 Factors alone are OK. Formula or completing the square need $x =$ as written. 2nd M1 For choosing outside region. Can fit their critical values. They must have two different critical values. $-2 > x > 9$ is M1A0 but ignore if it follows a correct version. $-2 < x < 9$ is M0A0 whatever the diagram looks like. 2nd A1 Use of $\geq$ in final answer gets A0

 This book honours the outstanding contributions of Vladimir Vapnik a rare example of a scientist for whom the following
 statements hold true simultaneously his work led to the inception of a new field of research the theory of statistical learning
 and empirical inference he has lived to see the field blossom and he is still as active as ever He started analyzing learning
 algorithms in the 1960s and he invented the first version of the generalized portrait algorithm He later developed one of the
 most successful methods in machine learning the support vector machine SVM more than just an algorithm this was a new
 approach to learning problems pioneering the use of functional analysis and convex optimization in machine learning Part I
 of this book contains three chapters describing and witnessing some of Vladimir Vapnik s contributions to science In the first
 chapter L on Bottou discusses the seminal paper published in 1968 by Vapnik and Chervonenkis that lay the foundations of
 statistical learning theory and the second chapter is an English language translation of that original paper In the third
 chapter Alexey Chervonenkis presents a first hand account of the early history of SVMs and valuable insights into the first
 steps in the development of the SVM in the framework of the generalised portrait method The remaining chapters by leading
 scientists in domains such as statistics theoretical computer science and mathematics address substantial topics in the theory
 and practice of statistical learning theory including SVMs and other kernel based methods boosting PAC Bayesian theory
 online and transductive learning loss functions learnable function classes notions of complexity for function classes multitask
 learning and hypothesis selection These contributions include historical and context notes short surveys and comments on
 future research directions This book will be of interest to researchers engineers and graduate students engaged with all
