Emerging Environmental Technologies Volume II :

Emerging Environmental Technologies, Volume II Vishal Shah, 2010 While numerous journals and books are available in the market highlighting the developments in the field of environmental technology none of them exclusively focuses on the technologies that would be in the forefront in near to far future Each and every article in the book is peer reviewed and from a different sub discipline Because of its interdisciplinary topics on for instance air pollution and energy production this makes it a one book for all and serves as an excellent resource for scientists entrepreneurs politicians and non governmental organizations who wish to gain information on upcoming and promising technologies *Emerging Environmental Technologies, Volume II* Vishal Shah, 2009-12-02 Within the span of last couple of years the increasing human interference with various natural ecosystems and higher discharge of pollutants has presented numerous challenges to the society related to preserving the nature for a better tomorrow The challenges also mount pressure on the scientific community to invent technologies that would provide solutions to the problems that are man made and also decrease the negative consequences that we are facing because of our own actions This edited book attempts to present eight technological innovations that have shown potential to provide answers to a few challenges Like the previous collection the described innovations in the current volume also cover a range of areas including water and soil pollution bio sensors and energy However it is to be realized that no combination of technology can be enough to make a sizeable difference As I said in my last collection technological advances have to be integrated with a change in social behavior The philosophy of sustainable development has to be the principle of future planning and growth In this collection I am pleased to include an article on noise pollution Noise is a pollutant of our own behavior and can only be solved by a behavioral change The change that is either voluntary or enforced by laws As an environmental scientist noise is not normally a pollutant that would come in mind as a leading pollutant **Emerging Environmental Technologies** Vishal Shah, 2008-08-18 In this day and age it is unfortunate that the economic prosperity and development leads to disruption of the dynamic balance of the environment The philosophy of sustainable development has been presented for a long period of time but it has not been able to bring about a substantial change in our society The transformation of this philosophy into a practical reality seems to be far away at least in the foreseeable future In my opinion the only way I see the revolution taking place is for us to incorporate sustainability in our daily living and to keep pushing for a sustainable society Meanwhile we also need scientists to work on technologies that would lead us to that goal at a faster pace Technologies that are completely environmentally friendly are needed urgently And if such technologies or ideas of one exists a platform is required that showcases such ideas to the scientific and non scientific audience Through this book I am happy to present the thoughts of seven different research groups whose work may lead us to the doorsteps of sustainable society As scientists most of us specialize in a sub topic that may be related to one of the three environmental components air land or water Over a period of time we become so

engrossed with the sub discipline of our specialization that we only have glimpses of what is happening in other disciplines

The Nexus: Energy, Environment and Climate Change Walter Leal Filho, Dinesh Surroop, 2017-10-30 This book focuses on the water energy climate nexus which can be used to improve energy security and quality of life for millions of people in developing countries It enhances the reader's understanding of the link between energy and climate through the development of new approaches to and methods for energy generation energy use and climate change adaptation and resilience By presenting case studies and research reports the book addresses the relevant issues needed in order to analyze and successfully implement technologies in the water energy climate nexus It focuses on the contributions of higher education institutions in terms of capacity building for energy efficiency energy access and energy security as they relate to climate change mitigation The book combines results from the authors own research with detailed analyses and the research presented lays the foundation for innovative new concepts and ideas which the authors subsequently discuss The book will appeal to all those interested in the links between energy issues sustainability and climate change as it focuses on the exchange between science and technology experts as well as decision makers It also supports students studying renewable energies and energy security while serving as a valuable reference source for researchers professionals practitioners and scientists
