

**In this practical book, you will find the essential features that need to be taken into consideration during gestation, calving and the postpartum period in order to deal with calving successfully.**

### 3 Physiology of calving: normal delivery

#### Stages of normal delivery

Calving takes place in three well-defined stages:

1. Distension stage
2. Partial expulsive stage
3. Effortful expulsive stage

Stage	Duration	Signs	Comments
Distension	6-10 hours	Mucus, mottledness, redness to skin. Usually, the fetal membranes can be seen in the vulva.	Gradually becomes positioned in the pelvic canal.
Partial expulsion	Usually 1-2 hours (Rare: 30 mins or more)	Abdominal contractions that increase in frequency, intensity, regularity, rhythm of the lower contracting and relaxation of the bulk.	Fetus being pushed down.
Effortful expulsion	Within 10-15 postpartum	Relaxation of the pelvic floor.	Fetus now free.

#### 1. Distension stage

Distension stage of calving. The vulva is enlarged and the fetal membranes are visible.

- Cervix progressively dilates until approximately the size of a fist.
- The position of the cervix is up and 10-15 hours before the fetus is born.
- Characterised by a specific, rhythmic, mottledness, redness to skin, and a protruding mass of fetal membranes.
- Repeated series of abdominal contractions of 10-15 minutes.
- During contractions, which are slow, the calf is pushed down.
- When the cervix is sufficiently dilated, the fetus is pushed through it and the calf is born.

#### 2. Partial expulsive stage

- Abdominal contractions start as the calf's head passes down the cervix.
- Contractions become more frequent (every 2-3 minutes), last longer and increase in intensity.
- Fetus is pushed down, especially head, down to the pelvic canal.
- Fetus is in the pelvic canal, the top of the fetal membranes, the "water bag", is visible.

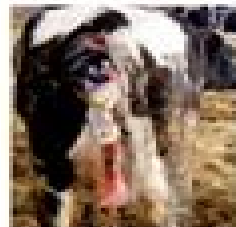

### 3 Physiology of calving: normal delivery

#### Presentations

#### Definitions

- **Presentation** indicates the relation between the long axis of the fetus and the plane of the pelvic canal.
- **Position** indicates which surface of the fetus is in contact with the pelvic canal (ventral or dorsal).
- **Presentation** indicates the position of the fetus with head, in extension or flexion.

In a normal spontaneous delivery, two presentations are possible:

#### Normal

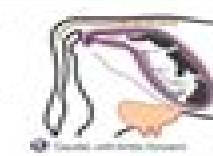

This is the most common position of the calf.

- **Normal presentation:** 1 is born "head first".
- **Normal position:** the calf is born in a head-down position.
- **Normal presentation:** the calf is born in a head-down position.

#### Abnormal

- **Abnormal presentation:** 1 is born "tail first".
- **Abnormal position:** the calf is born in a tail-down position.
- **Abnormal presentation:** the calf is born in a tail-down position.

#### Normal presentation

#### Abnormal presentation
