Čeginskas,Aino-Kaisa Koistinen,2020-07-14 Challenges and Solutions in Ethnographic Research Ethnography with a Twist seeks to rethink ethnography outside the box of its previous tradition and to develop ethnographic methods by critically discussing the process ethics impact and knowledge production in ethnographic research This interdisciplinary edited volume argues for a twist that supports openness courage and creativity to develop and test innovative and unconventional ways of thinking and doing ethnography Ethnography with a twist means both an intentional aim to conduct ethnographic research with novel approaches and methods but also sensitivity to recognize and creativity to utilize different kinds of twist moments that ethnographic research may create for the researcher This edited volume critically evaluates new and old methodological tools and their ability to engage with questions of power difference It proposes new collaborative methods that allow for co production and co creation of research material as well as shared conceptual work and wider distribution of knowledge The book will be of use to ethnographers in humanities and social science disciplines including sociology anthropology and communication studies   **Information Technology and Organizational Learning** Arthur M. Langer,2017-10-17 Focusing on the critical role IT plays in organizational development the book shows how to employ action learning to improve the competitiveness of an organization Defining the current IT problem from an operational and strategic perspective it presents a collection of case studies that illustrate key learning issues It details a dynamic model for effective IT management through adaptive learning techniques supplying proven educational theories and practices to foster the required changes in your staff It examines existing organizational learning theories and the historical problems that occurred with companies that have used them as well as those that have failed to use them   **Ethics for the Information Age** Michael Jay Quinn,2024-03 Computers and high speed communication

networks are transforming our world These technologies have brought us many benefits but they have also raised many social and ethical concerns My view is that we ought to approach every new technology in a thoughtful manner considering not just its short term benefits but also how its long term use will affect our lives A thoughtful response to information technology requires a basic understanding of its history an awareness of current information technology related issues and a familiarity with ethics I have written Ethics for the Information Age with these ends in mind Ethics for the Information Age is suitable for college students at all levels The only prerequisite is some experience using computers and the Internet The book is appropriate for a stand alone computers and society or computer ethics course offered by a computer science business or philosophy department It can also be used as a supplemental textbook in a technical course that devotes some time to social and ethical issues related to computing As students discuss controversial issues related to information technology they have the opportunity to learn from one other and improve their critical thinking skills The provocative questions raised at the end of every chapter together with dozens of in class exercises provide many opportunities for students to express their views learn from their classmates and refine their positions on important issues My hope is that through these discussions students will get better at evaluating complex issues and defending their conclusions with facts sound values and rational arguments

The Lincoln Library of Essential Information an Up to Date Manual for Daily Reference, for Self Instruction, and for General Culture Named in Appreciative Remembrance of Abraham Lincoln, the Foremost American Exemplar of Self Education ,1924   **The Impact of Sensory, Linguistic and Social Deprivation on Cognition** Matthew Dye,Olivier Pascalis,2017-12-21 Early experience plays a crucial role in determining the trajectory of cognitive development For example early sensory deprivation is known to induce neural reorganization by way of adaptation to the altered sensory experience Neville and Bavelier s compensatory theory hypothesizes that loss of one sense may bring about a sensory enhancement in the remaining modalities Sensory deprivation will however also impact the age of emergence or the speed of acquisition of cognitive abilities that depend upon sensory inputs Understanding how a child s early environment shapes their cognition is not only of theoretical interest It is essential for the development of early intervention programs that address not just the early deprivation itself but also the cognitive sequelae of such deprivation The articles in this e book all address different aspects of deprivation sensory linguistic and social and explore the impacts of such deprivation on a wide range of cognitive outcomes In reading these contributions it is important to note that sensory linguistic and social deprivation are not independent factors in human experience For example a child born deaf into a hearing family is likely to experience delays in exposure to natural language with subsequent limits on their linguistic competence having an effect on social interactions and inclusion a child raised in environments where social interaction is highly limited is also likely to experience reductions in the quantity and quality of linguistic inputs Future work will need to carefully examine the complex interactions between the sensory linguistic and social environments of children raised in atypical or impoverished environments   Computing
