Georges Canguilhem Science Et Nonscience:

Canguilhem Stuart Elden, 2019-07-12 Georges Canguilhem 1904-95 was an influential historian and philosopher of science as renowned for his teaching as for his writings. He is best known for his book *The Normal and the Pathological* originally his doctoral thesis in medicine but he also wrote a thesis in philosophy on the concept of the reflex supervised by Gaston Bachelard. He was the sponsor of Michel Foucault's doctoral thesis on madness. However his work extends far beyond what is suggested by his association with these thinkers. Canguilhem also produced a series of important works on the natural sciences including studies of evolution, psychology, vitalism and mechanism, experimentation, monstrosity and disease. Stuart Elden discusses the whole of this important thinker's complex work including recently rediscovered texts and archival materials. Canguilhem always approached questions historically examining how it was that we came to a significant moment in time, outlining tensions, detours and paths not taken. The first comprehensive study in English, this book is a crucial guide for those coming to terms with Canguilhem's important contributions and will appeal to researchers and students from a range of fields.

Writing the History of the Mind Cristina Chimisso, 2016-02-11 For much of the twentieth century French intellectual life was dominated by theoreticians and historians of mentalité. Traditionally the study of the mind and of its limits and capabilities was the domain of philosophy; however in the first decades of the twentieth century practitioners of the emergent human and social sciences were increasingly competing with philosophers in this field: ethnologists, sociologists, psychologists and historians of science were all claiming to study how people think. Scholars including Gaston Bachelard, Georges Canguilhem, Lucien Lévy-Bruhl, Lucien Febvre, Abel Rey, Alexandre Koyré and Hans Reichenbach were all investigating the mind historically and participating in shared research projects. Yet as they have since been appropriated by the different disciplines, literature on their findings has so far failed to recognise the connections between their research and their importance in intellectual history. In this exemplary book, Cristina Chimisso reconstructs the world of these intellectuals and the key debates in the philosophy of mind, particularly between those who studied specific mentalities by employing prevalently historical and philological methods and those who thought it possible to write a history of the mind, outlining the evolution of ways of thinking that had produced the modern mentality. Dr Chimisso situates the key French scholars in their historical context and shows how their ideas and agendas were indissolubly linked with their social and institutional positions, such as their political and religious allegiances, their status in academia and their familial situation. The author employs a vast range of original research using philosophical and scientific texts as well as archive documents, correspondence and seminar minutes from the period covered to recreate the milieu in which these relatively neglected scholars made advances in the history of philosophy and science and produced.

The Human Body in the Age of Catastrophe Stefanos Geroulanos, Todd Meyers, 2018-08-13 The injuries suffered by soldiers during WWI were as varied as they were brutal. How could the human body suffer and often absorb such disparate traumas? Why might the same wound lead

one soldier to die but allow another to recover In *The Human Body in the Age of Catastrophe* Stefanos Geroulanos and Todd Meyers uncover a fascinating story of how medical scientists came to conceptualize the body as an integrated yet brittle whole Responding to the harrowing experience of the Great War the medical community sought conceptual frameworks to understand bodily shock brain injury and the vast differences in patient responses they occasioned Geroulanos and Meyers carefully trace how this emerging constellation of ideas became essential for thinking about integration individuality fragility and collapse far beyond medicine in fields as diverse as anthropology political economy psychoanalysis and cybernetics Moving effortlessly between the history of medicine and intellectual history *The Human Body in the Age of Catastrophe* is an intriguing look into the conceptual underpinnings of the world the Great War ushered in

On the Politics of the Living Federico Testa, 2025-04-17 Bringing the philosophies of Michel Foucault and Georges Canguilhem into dialogue Federico Testa examines the notions of life and norms underlying our modern experience of politics Today's global health crisis acts as a stark reminder that life is at the core of our political debates and dilemmas We can no longer think of forms of political organization citizenship and participation without considering the materiality and precarity of our own organic life Ours is a politics of the living Within this context this book examines Foucault's work on the politicization of life and biopolitics through the lens of Canguilhem's notion of norms Testa extracts from Canguilhem's philosophy the conceptual tools to re-interpret Foucault's ideas on power and reconceptualises normativity as a process of the creation of norms that provide tools for political and social analysis and for thinking resistance In so doing he uncovers new and important possibilities for biopolitical resistance Demonstrating not only Canguilhem's underexplored social and political concerns but also the intellectual osmosis between the two thinkers *On the Politics of the Living* is an urgent examination of the ever increasing significance of the concepts of life care and health in today's political discourse

Genesis and Development of French Historical Epistemology

Gerardo Ienna,2025-04-25 This book forms an important part of the current revival of the debate around the category of historical epistemology The term historical epistemology designates a methodology or research program aimed at building a historically informed theory of knowledge and or a history of science and technology that enhances its epistemological aspects This book offers an original panorama of the French debate surrounding the emergence and consolidation of the intellectual program of historical epistemology over a period ranging from the end of the 19th century to the second half of the 20th century The first section of this book sets out to reconstruct sociologically and historically the processes of circulation of ideas both nationally and internationally that constituted the conditions of possibility for the emergence of the very idea of historical epistemology in the French intellectual context The second section aims instead to highlight the main theoretical positions both epistemological and historiographical that would make it possible to trace a relative unity of intent among the authors who make up the canon of historical epistemology in their oppositional relationship to other intellectual trends Particular attention is also paid to defining a minor canon of this tradition represented by what is known as mathematical thought The third part of the volume focuses instead on reconstructing the anthropological sociological and political perspectives underlying the methodology employed by authors belonging to historical epistemology The three parts combined make for a uniquely broad yet focused book that is of interest to historians philosophers and scientists alike

New Challenges to Philosophy of Science Hanne Andersen,Dennis Dieks,Wenceslao J. Gonzalez,Thomas Uebel,Gregory Wheeler,2013-05-28 This volume is a serious attempt to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science This efforts should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity The overarching aim is to set the background for a collaborative project organising systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development
