Autistic Intelligence Douglas W. Maynard,Jason Turowetz,2022-05-25 As autism has become a widely prevalent diagnosis we have grown increasingly desperate to understand it Whether through baseless blame on vaccination or struggles to determine the potential genetic origins of autism Americans have devoted a great deal of thought to what autism is and where it comes from In Autistic Intelligence Douglas Maynard and Jason Turowetz focus on a different origin of autism the diagnostic process By turning to diagnosis they ask us to begin with the basic questions of what norms we measure autistic behavior against why we understand autistic behavior as disordered and how we go about assigning that disorder to particular people The authors take a close look at a clinic in which children are assessed for and diagnosed with autism They spent hours in assessment evaluations with psychologists pediatricians parents and children and the resulting data enabled them to make plain the systems language and categories that clinicians rely upon when making their assessments Those diagnostic tools determine the kind of information doctors can gather about children and indeed those assessments affect how children act Autism is not a stable category they show but the result of an interpretive act And in the process of

diagnosing children with autism they argue we miss all of the unique contributions they make the world around them

Twice Exceptional Scott Barry Kaufman, 2018 In an educational system founded on rigid standards and categories students who demonstrate a very specific manifestation of intelligence flourish while those who deviate tend to fall between the cracks Too often talents and interests that do not align with classroom conventions are left unrecognized and unexplored in children with extraordinary potential but little opportunity For twice exceptional 2e children who have extraordinary strengths coupled with learning difficulties the problem is compounded by the paradoxical nature of their intellect and an unbending system ill equipped to cater to their unique learning needs Twice Exceptional Supporting and Educating Bright and Creative Students with Learning Difficulties provides cutting edge evidence based approaches to creating an environment where twice exceptional students can thrive Viewing the 2e student as neither exclusively disabled nor exclusively gifted but rather as a dynamic interaction of both leading experts offer holistic insight into identification social emotional development advocacy and support for 2e students With chapters focusing on special populations including autism dyslexia and ADHD as well as the intersection of race and 2e this book highlights practical recommendations for school and social contexts In expounding the unique challenges faced by the 2e population Twice Exceptional makes a case for greater flexibility in our approach to education and a wider notion of what it means to be academically successful

Good Reasons for Bad Feelings Randolph M. Nesse, MD, 2019-02-12 A founder of the field of evolutionary medicine uses his decades of experience as a psychiatrist to provide a

much needed new framework for making sense of mental illness Why do I feel bad There is real power in understanding our bad feelings With his classic *Why We Get Sick* Dr Randolph Nesse helped to establish the field of evolutionary medicine Now he returns with a book that transforms our understanding of mental disorders by exploring a fundamentally new question Instead of asking why certain people suffer from mental illness Nesse asks why natural selection has left us all with fragile minds Drawing on revealing stories from his own clinical practice and insights from evolutionary biology Nesse shows how negative emotions are useful in certain situations yet can become overwhelming Anxiety protects us from harm in the face of danger but false alarms are inevitable Low moods prevent us from wasting effort in pursuit of unreachable goals but they often escalate into pathological depression Other mental disorders such as addiction and anorexia result from the mismatch between modern environment and our ancient human past And there are good evolutionary reasons for sexual disorders and for why genes for schizophrenia persist Taken together these and many more insights help to explain the pervasiveness of human suffering and show us new paths for relieving it by understanding individuals as individuals

Tangled Goods Iddo Tavory, Sonia Prelat, Shelly Ronen, 2022-06-24 The advertising industry seems like one of the most craven manifestations of capitalism with large firms crafting creative concepts designed to make big companies bigger through the sale of dubious if not downright harmful products In *Tangled Goods* authors Iddo Tavory Sonia Prelat and Shelly Ronen consider an important dimension of the advertising industry that appears to depart from the industry's consumerist foundations pro bono ad campaigns Interviewing more than 100 advertisers the authors trace the complicated web of meanings of the good in these pro bono projects Doing something altruistic often helps employees feel more at ease working for big pharma or corporate banks and often these projects afford them greater creative leeway than they normally have not to mention greater potential rewards and recognition Though the authors uncover selfish motivations behind altruistic work they are more interested in considering how these various notions of the good come together and fall apart with different motivations and benefits rising to the surface at different moments This book sheds new light on how goodness and prestige

personal and altruistic motivations interact to produce value for individuals and institutions
