American Auto Industry since NAFTA Greig Mordue, Dimitry Anastakis, 2024-10-01 The auto sector is North America's most iconic of industries. Since the North American Free Trade Agreement came into existence in 1994, the sector has undergone tremendous change, escalating concerns around climate change, advances in electric and automated vehicles, deindustrialization, reindustrialization, and the rise of low-cost locations as hubs for manufacturing. The North American Auto Industry since NAFTA examines the issues that have preoccupied the development of policy associated with the manufacture of automobiles in North America. The collection addresses the punctuations that have afflicted the industry since NAFTA's implementation, as well as the slower incremental evolutions that have also occurred. Several aspects of automobility and the industry are explored, including but not limited to the Canadian, American, and Mexican automotive sectors and their evolution and interaction under evolving trade regimes. The book analyses issues surrounding labour, technology, trade policy, regional development, the environment, and broader societal impacts of the automobile. It also draws on the expertise of a wide cross-section of industry experts and scholars to provide readers with a deeper understanding of the automotive industry and its central role in North America's economic, business, and political landscape.

Fordism Transformed Haruhito Shiomi, Kazuo Wada, 1995. Topical. Written by leading Japanese, American, and European scholars. Based on proceedings of a prestigious international conference. Japan is now the world's largest producer of cars, but it only began to catch up with its competitors after World War II by studying and modifying the Ford system of mass production implemented first in the USA in the early part of the century. Other countries have also developed the system in their own ways with varying degrees of success. The papers in this volume will examine and compare the experiences of different countries in modifying the Ford system and the impact of the quality control movement and lean production in Japan.

Polestar as a Rising Star in the EV Market. Case Study in the Field of Brand Management and Integrated Marketing Communications Jakob Maas, David Heidler, Tim Betz, Pim Groot Koerkamp, 2023-03-01. Case Study from the year 2021 in the subject Business Economics. Offline Marketing and Online Marketing. Grade 1-3. Linnaeus University course IMC Brand Management. Language: English. Abstract: In recent years, there have been many discussions and decisions about what the future of our vehicles and their engines should look like. But it's not just Norway that set these goals; California already has legislation that says only zero-emission vehicles will be allowed for sale by 2035. Furthermore, there are other approaches to how regions and communes convince people to buy electric cars. In Dubai, electric cars are still exempt from public parking fees until July 2022. The exemption even works automatically so owners don't have to do anything to get the free parking. The auto industry itself also needs to change in the direction towards zero-emission vehicles due to ongoing regulations from governments and local policies. Within the German auto

industry Audi is one of the most pressing They want all new Audi models to be purely electric from 2026 onwards with production of internal combustion engines to cease in 2033 Sweden s popular car manufacturer Volvo is even more ambitious Volvo Cars aims to become a leader in the fast growing premium electric car market and plans to become an all electric car company by 2030 By then the company plans to sell only fully electric cars and eliminate all internal combustion engine vehicles including hybrids from its global portfolio
