Caution

(Failure to observe the following items may cause serious consequences or damage to the objects)

- Dealers must explain in details the operations to their customers according to this manual.
- Wireless remote controller and parts are packed in the packing box supplied with the indoor unit.
- Before installing, check if the power supply and circuitry are normal and make sure the voltage is within $\pm 10\%$ of the voltage rating.
- The distance of  in the installation diagram is to ensure space for the air conditioner's performance. For convenience of service and maintenance in the future, install the air conditioner in the place with sufficient space in the vicinity.
- Care should be taken in cutting, extension and bending of the refrigerant piping and not to break the pipes. As this air conditioner uses new recyclable refrigerant, "R410A" be sure to follow three principles - keeping the refrigeration system dry, clean, and air tight, when installing the refrigerant piping.

Warning

(Failure to observe the following items may cause injury or death)

- Installation of air conditioner and electrical wiring must be handled by authorized installer only. do not attempt to handle them by yourselves (Handling charges are additional.)
- Before installing, read the installation instructions thoroughly and correctly.
- Use only those specified accessories when installing. otherwise, it may cause the unit body to fall, water leakage, current leakage and fire, etc.
- When discharging, refrigerant is required during installation, be sure to use an air vent and air breather, as refrigerant will produce toxic gas once it mixes with hot air.
- When performing wiring work, be sure to follow the electrical codes and installation instructions, and also be sure to use the power loops exclusively for the air conditioner.
- When installing or moving the units, the refrigeration system (piping) must not mix with refrigerant R22 or air, except refrigerant R410A. If air is mixed in, the system capacity will reduce, causing abnormal high pressure in the refrigeration system that may lead to copper tube breaking and failure to occur.

Concurrent Engineering and Design for Manufacture of Electronics Products Sammy G. Shina,2012-12-06 This book is intended to introduce and familiarize design production quality and process engineers and their managers to the importance and recent developments in concurrent engineering CE and design for manufacturing DFM of new products CE and DFM are becoming an important element of global competitiveness in terms of achieving high quality and low cost products The new product design and development life cycle has become the focus of many manufacturing companies as a road map to shortening new product introduction cycles and to achieving a quick ramp up of production volumes Customer expectations have increased in demanding high quality functional and user friendly products There is little time to waste in solving manufacturing problems or in redesigning products for ease of manufacture since product life cycles have become very short because of technological breakthroughs or competitive pressures Another important reason for the increased attention to DFM is that global products have developed into very opposing roles either they are commodities with very similar features capabilities and specifications or they are very focused on a market niche In the first case the manufacturers are competing on cost and quality and in the second they are in race for time to market DFM could be a very important competitive weapon in either case for lowering cost and increasing quality and for increasing production ramp up to mature volumes *Federal Register* ,1992-08-26 **Product Development** Anil Mital,Anoop Desai,Anand Subramanian,Aashi Mital,2014-08-12 Product development teams are composed of an integrated group of professionals working from the nascent stage of new product planning through design creation and design review and then on to manufacturing planning and cost accounting An increasingly large number of graduate and professional training programs are aimed at meeting that need by creating a better understanding of how to integrate and accelerate the entire product development process This book is the perfect accompaniment and a comprehensive guide The second edition of this instructional reference work presents invaluable insight into the concurrent nature of the multidisciplinary product development process It can be used in the traditional classroom in professional continuing education courses or for self study This book has a ready audience among graduate students in mechanical and industrial engineering as well as in many MBA programs focused on manufacturing management This is a global need that will find a receptive readership in the industrialized world particularly in the rapidly developing industrial economies of South Asia and Southeast Asia Reviews the precepts of Product design in a

step by step structured process and focuses on the concurrent nature of product design Helps the reader to understand the connection between initial design and interim and final design including design review and materials selection Offers insight into roles played by product functionality ease of assembly maintenance and durability and their interaction with cost estimation and manufacturability through the application of design principles to actual products *PC Troubleshooter Resource Guide* TechRepublic, Incorporated,2004 Design for X Charles M. Concurrent Engineering C.S. Syan, U. Menon, 2012-12-06 BACKGROUND There is an increasing awareness that time to market is the key competitive issue in the manufacturing industry today. The global markets are demanding products that are well designed, are of high quality and are at low prices with ever decreasing lead times. Hence manufacturers are forced to utilize the best methods of technology with efficient control and management accompanied by suitably enabling organizational structures. Concurrent engineering (CE) is widely seen to be the methodology that can help satisfy these strenuous demands and keep the profitability and viability of product developers, manufacturers and suppliers high. There have been many reported successes of CE in practice. Rover was able to launch Land Rover Discovery in 18 months as compared with 48-63 months for similar products in Europe. Because of its early introduction to the market, it became the best selling product in its class. AT&T report part counts down to one ninth of their previous levels and quality one hundred times in surface defects for VLSI very improvements of large scale integration circuits as a result of using the CE approach.

WHO SHOULD READ THIS TEXT This book will aim to provide a sound basis for the very diverse subject known as concurrent engineering. Concurrent engineering is recognized by an increasingly large proportion of the manufacturing industry as a necessity in order to compete in today's markets. This recognition has created the demand for information awareness and training in good concurrent engineering practice.

EVALUATION OF SHIPBUILDING CAD/CAM SYSTEMS (PHASE I), 1996 *Integrated Product, Process and Enterprise Design* Ben Wang, 1997-08-31 The need exists in the private sector and government manufacturing sites to reduce product development time, production lead times, inventory and non value added activities. At the same time there is increased pressure to improve manufacturing process yields, production efficiency and resource utilization. Much of the technology required to meet these needs already exists but an integrated structure that can demonstrate the potential for the technology in a concurrent engineering context does not. This book provides a road map for building the integrated technology environment to evaluate existing products, manufacturing processes and system design tools. This book details innovative approaches that will significantly improve design, manufacturing technology development and deployment capabilities for civilian and defense applications. These

approaches are integrated product process and system design IPPSD initiatives which will greatly enhance the manufacturing competitiveness of the economy These approaches involve the use of simulation modeling tools and computerized virtual workstations in conjunction with a design environment which allows a diverse group of researchers manufacturers and suppliers to work within a comprehensive network of shared knowledge The IPPSD infrastructure consists of virtual workstations servers and a suite of simulation quantitative computational analytical experimental and qualitative tools Such an IPPSD infrastructure will permit effective and efficient predictions of complete product design manufacturing process design and customer satisfaction
