

"English" with a life of its own at certain times, so the language is still, in my view, not to be seen as a living organism.

It is not known with any certainty as yet when language evolved, one hundred thousand years ago? Later? It probably began as signs and calls, gestures and facial and bodily expressions, many of which we retain still. We speak of "body language." We can tell what someone is "saying" by their expression. We "talk" in our expressions still and our extreme calls of fear or ecstasy may not be much different from those of the first man who spoke a hundred thousand years ago. But then language began to build. We will never know who laid the foundations. Stephen Pinker and others think that these speakers arrived with the gift of language intact — the language instinct. What remained to be done was to find the methods and opportunities to turn that instinct into words.

But who found the first words? Who finds new words today? We know that Shakespeare put into print at least ten thousand new words, but the majority of words came out of the crowd. An American frontiersman like Davy Crockett can be as good a word spinner as a Master of Trinity College, Cambridge. Early words came from those who worked the land, those whose centuries of nose to the earth made them acquainted with the minutiae of nature, and most likely it was they who, often out of necessity, had to name what they saw, have things, and creatures which might endanger or nourish them. The giving of names could be called the most democratic communal effort in our history. Language is the finest achievement of culture — and in my view, the English language is the most remarkable of the many contributions these islands have
