Calculus Problem Solutions with MATLAB® Dingyü Xue, 2020-03-23 This book focuses on solving practical problems in calculus with MATLAB Descriptions and sketching of functions and sequences are introduced first followed by the analytical solutions of limit differentiation integral and function approximation problems of univariate and multivariate functions Advanced topics such as numerical differentiations and integrals integral transforms as well as fractional calculus are also covered in the book

Multiple Integrals, A Collection of Solved Problems Steven Tan, A Collection of Solved Problems Series These books teach by solving problems Intended as companions to standard textbooks for calculus students they help readers review and master what they've learned by showing them how to solve relevant problems The first part of each section presents the definitions and theorems without proofs necessary for problem solving and sometimes followed by comments or remarks These definitions and theorems correspond to those given in most calculus textbooks where all concepts and theorems are followed by explanations and proofs The second part contains problems and complete solutions solved in such a simple way that the students find no difficulty to understand They can be used as practicing study guides by students and as supplementary teaching sources by instructors Since the problems have very detailed solutions they are helpful for under prepared students Includes Integration in Two Variables Double Integrals over Nonrectangular Regions Double Integrals in Polar Coordinates Applications of Double Integrals Surface Area Triple Integrals Triple Integrals in Cylindrical and Spherical Coordinates Change of Variables Applications of Triple Integrals Features a selection of more than 400 problems solutions are presented with attention to detail graphically illustrated throughout Other titles in this series Sequences and Infinite Series A Collection of Solved Problems

Luis Vazquez, 2007 The Heat Equation is one of the three classical linear partial differential equations of second order that form the basis of any elementary introduction to the area of PDEs and only recently has it come to be fairly well understood In this monograph aimed at research students and academics in mathematics and engineering as well as engineering specialists Professor Vazquez provides a systematic and comprehensive presentation of the mathematical theory of the nonlinear heat equation usually called the Porous Medium Equation PME This equation appears in a number of physical applications such as to describe processes involving fluid flow heat transfer or diffusion Other applications have been proposed in mathematical biology lubrication boundary layer theory and other fields Each chapter contains a detailed introduction and is supplied with a section of notes providing comments historical notes or recommended reading and exercises for the reader

Autonomous Search Youssef Hamadi, Eric Monfroy, Frédéric Saubion, 2012-01-05 Decades of innovations in combinatorial problem solving have produced better and more complex algorithms These new methods are better since they can solve larger problems and address new application domains They are also more complex which means that they are hard to reproduce and often harder to fine tune to the peculiarities of a given problem This last point has created a paradox where efficient tools are out of reach of practitioners Autonomous search AS represents a new research field defined to precisely address the above challenge Its major strength and originality consist in the fact that problem solvers can now perform self improvement operations based on analysis of the performances of the solving process including short term reactive reconfiguration and long term improvement through self analysis of the performance offline tuning and online control and adaptive control and supervised control Autonomous search crosses the chasm and provides engineers and practitioners with systems that are able to autonomously self tune their performance while effectively solving problems This is the first book dedicated to this topic and it can be used as a reference for researchers engineers and postgraduates in the areas of constraint programming machine learning evolutionary computing and feedback control theory After the editors introduction to autonomous search the chapters are focused on tuning algorithm parameters autonomous complete tree based constraint solvers autonomous control in metaheuristics and heuristics and future autonomous solving paradigms Autonomous search AS represents a new research field defined to precisely address the above challenge Its major strength and originality consist in the fact that problem solvers can now perform self improvement operations based on analysis of the performances of the solving process including short term reactive reconfiguration and long term improvement through self analysis of the performance offline tuning and online control and adaptive control and supervised control Autonomous search crosses the chasm and provides engineers and practitioners with systems that are able to autonomously self tune their performance while effectively solving problems This is the first book dedicated to this topic and it can be used as a reference for researchers engineers and postgraduates in the areas of constraint programming machine learning evolutionary computing and feedback control theory After the editors introduction to autonomous search the chapters are focused on
