Equations and Inequalities Guido Walz, 2021-07-02 The book teaches the basics of solving equations and inequalities in easily understandable language One of the main topics is the solving of quadratic equations regardless of whether they already exist in normal form or have to be brought into it first The author treats the p q formula and the midnight formula as tools for this purpose In addition the book deals with linear equations and in general with the question of which manipulations one may make on an equation without changing its solutions Furthermore the most important inequalities are treated and strategies for their solution are shown This Springer essential is a translation of the original German 1st edition essentials Gleichungen und Ungleichungen by Guido Walz published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2018 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors Linear Inequalities and Related Systems.

New Perspectives on the Theory of Inequalities for Integral and Sum Nazia Irshad,Asif R. Khan,Faraz Mehmood,Josip E. Pecaric,2022-04-19 This book provides new contributions to the theory of inequalities for integral and sum and includes four chapters In the first chapter linear inequalities via interpolation polynomials and green functions are discussed New results related to Popoviciu type linear inequalities via extension of the Montgomery identity the Taylor formula Abel Gontscharoff s interpolation polynomials Hermite interpolation polynomials and the Fink identity with Green s functions are presented The second chapter is dedicated to Ostrowski s inequality and results with applications to numerical integration and probability theory The third chapter deals with results involving functions with nondecreasing increments Real life applications are discussed as well as and connection of functions with nondecreasing increments together with many important concepts including arithmetic integral mean wright convex functions convex functions nabla convex functions Jensen m convex functions m convex functions m nabla convex functions k monotonic functions absolutely monotonic functions completely monotonic functions Laplace transform and exponentially convex functions by using the finite difference operator of order m The fourth chapter is mainly based on Popoviciu and Cebaysev Popoviciu type identities and inequalities In this last chapter the authors present results by using delta and nabla operators of higher order **New Methods for Linear Inequalities** Y.
