World Development Report 2018 World Bank Group, 2017-10-16 Every year the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR **LEARNING to Realize Education's Promise** is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes. First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity but fulfilling its potential requires better policies both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden. So as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated and other inputs support the teacher learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning and taking an adaptive approach to reform.

Building the Future Internet through FIRE Martin Serrano, Nikolaos Isaris, Hans Schaffers, 2022-09-01 The Internet as we know it today is the result of a continuous activity for improving network communications, end user services, computational processes and also information technology infrastructures. The Internet has become a critical infrastructure for the human being by offering complex networking services and end user applications that all together have transformed all aspects, mainly economical, of our lives. Recently, with the advent of new paradigms and the progress in wireless technology, sensor networks and information systems and also the inexorable shift towards everything connected paradigm, first as

known as the Internet of Things and lately envisioning into the Internet of Everything a data driven society has been created In a data driven society productivity knowledge and experience are dependent on increasingly open dynamic interdependent and complex Internet services The challenge for the Internet of the Future design is to build robust enabling technologies implement and deploy adaptive systems to create business opportunities considering increasing uncertainties and emergent systemic behaviors where humans and machines seamlessly cooperate Data-Driven Innovation Big Data for Growth and Well-Being OECD,2015-10-06 This report improves the evidence base on the role of Data Driven Innovation for promoting growth and well being and provide policy guidance on how to maximise the benefits of DDI and mitigate the associated economic and societal risks
