- 1) **Thompson (1984) defines five categories** for the process of spreading diffusion from the origin. **Source** is the starting location; **transmission** is what the person who carries the information is doing; **link** is the path; **the original source and spreading mechanism** is the only valid way to count your initial spreader (first generation members).
- 2) **Thompson (1984) describes diffusion** as movement on the basis of **top or bottom of the pecking order**. **Top** means you think or understand how the behavior or innovation will be adopted.
- 3) **Bottom** is more random in the context of your needs, open to the idea because in the opinion of your group or the group you are interested in.
- 4) **Bottom** people usually go to work without having to be invited (e.g., **innovators** go to work without any official invitation) and **change** from innovators to spreading first (e.g., **Adopters**, **Adopting**, or **Adoptees**).
- 5) **Adopters** may change from innovators to the full category **adoption** by the third stage. **They will** change from innovators to spreaders, and **change** from spreaders to the full category **adoption** by the fourth stage. **They will** change from spreaders to the full category **adoption** by the fifth stage.
