Robert Franek, 2010-08-10 Vols for 2006 edited by Robert Franek **The Oxford Handbook of Identities in Organizations** Andrew D. Brown, 2020-01-16 Conceived as the meanings that individuals attach to their selves a substantial stockpile of theory related to identities accumulated across the arts social sciences and humanities over many decades continues to nourish contemporary research on self identities in organizations. In times which are more reflexive narcissistic and fluid the identities of participants in organizations are increasingly less fixed and less certain making identity issues both more salient and more interesting. Particular attention has been given to processes of identity construction often styled identity work. Research has focused on how why and when such processes occur and their implications for organizing and individual group and organizational outcomes. This has resulted in a burgeoning stream of research from discursive dramaturgical symbolic socio cognitive and psychodynamic perspectives that most often casts individuals efforts to fabricate identities as intentional relational and consequential. Seemingly intractable debates centred on the nature of identities their relative stability or fluidity whether they are best regarded as coherent or fractured positive or not and how they are fabricated within relations of power combined with other conceptual issues continue to invigorate the field. However these debates have also led to some scepticism regarding the future potential of identities research. Yet as the chapters in this Handbook demonstrate there are considerable grounds for optimism that identity as root metaphor nexus concept and means to bridge levels of analysis has significant potential to generate multiple compelling streams of theorizing in organization and management studies. *Architecture and the Smart City* Sergio M. Figueiredo, Sukanya Krishnamurthy, Torsten Schroeder, 2019-10-18 Increasingly the world around us is becoming smart. From smart meters to smart production from smart surfaces to smart grids from smart phones to smart citizens. Smart has become the catch all term to indicate the advent of a charged technological shift that has been propelled by the promise of safer more convenient and more efficient forms of living. Most architects designers planners and politicians seem to agree that the smart transition of cities and buildings is in full swing and inevitable. However beyond comfort safety and efficiency how can smart design and technologies assist to address current and future challenges of architecture and urbanism. *Architecture and the Smart City* provides an architectural perspective on the emergence of the smart city and offers a wide collection of resources for

developing a better understanding of how smart architecture smart cities and smart systems in the built environment are discussed designed and materialized It brings together a range of international thinkers and practitioners to discuss smart systems through four thematic sections Histories and Futures Agency and Control Materialities and Spaces and Networks and Nodes Combined these four thematic sections provide different perspectives into some of the most pressing issues with smart systems in the built environment The book tackles questions related to the future of architecture and urbanism lessons learned from global case studies and challenges related to interdisciplinary research and critically examines what the future of buildings and cities will look like      **Public Relations and the Power of Creativity** Sarah Bowman, Adrian
