Thus far a vast array of high performance

tectons based AFMs have been initiated To some extent the cooperative principle of stacking and other noncovalent interactions has been revealed and the structure property relationships have been disclosed Despite the existing progress this field still faces challenges for example i the need for scalable assembly manufacture under ambient conditions with low cost facile environmentally friendly protocols ii clearer correlations bridging the underlying intricate relationships of each successive step in assembly manufacture iii corresponding theoretical calculations for guiding the rational design of tectons that elucidate the cooperative principle of stacking and other noncovalent interactions as well as the principle of structure performance correlation iv stability and durability among the most important concerns regarding their commercialization. The advancements accumulated during the past decades have established a solid foundation for the further development of conjugated systems based AFMs. We believe that with unrelenting efforts from both scientific and technical communities of various backgrounds their practical applications will eventually be fulfilled. This Research Topic aims to address the above mentioned challenges. **Japanese Technical Abstracts**, 1987** **Popular Science**, 1976-09** Popular Science** gives our readers the information and tools to improve their technology and their world.
