Reichl,2009-09-16 This enquiry into the principles and practice of reading literature brings together insights from cognitive studies literary theory empirical literature studies learning and teaching research and higher education research Reading is conceptualised as an active process of meaning making that is determined by subjective as well as contextual factors and

guided by a sense of purpose This sense of purpose part of a professional and conscious approach to reading is the central element in the model of reading that this study proposes As well as a conceptual aim this model also has pedagogical power and serves as the basis for a number of critical and creative exercises geared towards developing literary reading strategies and strategic reading competences in general These activities demonstrate how the main tenets of the study can be put into practice within the context of a particular institution of higher education Mathematics and Science Across the Curriculum ,2002 **Virtual Learning Environments** Martin Weller,2007-05-01 Virtual learning environments are widely spread in higher education yet they are often under utilised by the institutions that employ them This book addresses the need to move beyond thinking about the VLE simply in terms of the particular package that an institution has adopted and viewing it as a significant educational technology that will shape much of the teaching and learning process in the coming years Considering how virtual learning environments can be successfully deployed and used for effective teaching it sets out a model for effective use focussing on pedagogic application rather than a specific technology and seeks to provide a bridge between pedagogical approaches and the tools educators have at their disposal It contains essential advice for those choosing a VLE and encourages all those involved in the deployment of a VLEs to use them more productively in order to create engaging learning experiences **Student Lawyer** ,1992
