

Once we have found some points on the graph of the line we are able to graph the line.

Method 2.

1. Given the equation $y = -2x + 8$, find the y-intercept. y-intercept is 8. Therefore one point on the line is (0, 8).

2. Now having one point on the line, graph the y-intercept and apply the slope multiple times.

Slope is rise over run so we know that we must go up or down based on the number in the numerator and go left or right based on the number in the denominator.

Select a method and graph the equation above.

Practice!

On the following page graph the following equations

1. $y = 4x + 3$

2. $y = -x - 2$

3. $y = -2x + 2$

4. $y = 2x - 2$

5. $y = 3x - 4$

6. $y = \frac{1}{2}x + 3$

7. $y = -5x - 1$

8. $y = -25x - 4$

9. $y = -\frac{2}{3}x + 3$

10. $y = \frac{1}{3}x - 3$

Tewani, 2022-05-19 Calculus for JEE Advanced a Cengage Exam Crack Series product is designed to help aspiring engineers focus on the subject of mathematics from two standpoints To develop their caliber aptitude and attitude for the engineering field and profession To strengthen their grasp and understanding of the concepts of the subjects of study and their applicability at the grassroots level Each book in this series approaches the subject in a very conceptual and coherent manner While its illustrative solved examples facilitate easy mastering of the concepts and their applications an array of solved problems exposes the students to a variety of questions that they can expect in the examination The coverage and features of this series of books make it highly useful for all those preparing for JEE Main and Advanced and aspiring to become engineers Mathematics in Middle and Secondary School Alexander Karp, Nicholas Wasserman, 2014-11-01 The experience and knowledge acquired in teacher education courses should build important fundamentals for the future teaching of mathematics In particular experience in mathematical problem solving and in planning lessons devoted to problem solving is an essential component of teacher preparation This book develops a problem solving approach and is intended to be a text used in mathematics education courses or professional development for pre service or in service middle and secondary school teachers It can be used both in graduate and undergraduate courses in accordance with the focus of

teacher preparation programs The content of the book is suited especially for those students who are further along in their mathematics education preparation as the text is more involved with mathematical ideas and problem solving and discusses some of the intricate pedagogical considerations that arise in teaching The text is written not as an introduction to mathematics education a first course but rather as a second or probably third course The book deals both with general methodology issues in mathematics education incorporating a problem solving approach Chapters 1 6 and with more concrete applications within the context of specific topics algebra geometry and discrete mathematics Chapters 7 13 The book provides opportunities for teachers to engage in authentic mathematical thinking The mathematical ideas under consideration build on specific middle and secondary school content while simultaneously pushing the teacher to consider more advanced topics as well as various connections across mathematical domains The book strives to preserve the spirit of discussion and at times even argument typical of collaborative work on a lesson plan Based on the accumulated experience of work with future and current teachers the book assumes that students have some background in lesson planning and extends their thinking further Specifically this book aims to provide a discussion of how a lesson plan is constructed including the ways in which problems are selected or invented rather than the compilation of prepared lesson plans This approach reflects the authors view that the process of searching for an answer is often more important than the formal result **Jacaranda**
