Ecology, Virulence and Detection of Pathogenic and Pandemic Vibrio Parahaemolyticus Pendru Raghunath, Iddya Karunasagar, Indrani Karunasagar, 2016-08-15 *Vibrio parahaemolyticus* is a gram negative halophilic bacterium that occurs in the coastal and estuarine environments worldwide and is implicated in several cases of seafood born gastroenteritis around the globe However not all strains of *V parahaemolyticus* are pathogenic Clinical isolates of *V parahaemolyticus* most often produce either the thermostable direct haemolysin TDH or TDH related haemolysin TRH encoded by *tdh* and *trh* genes respectively A pandemic clone of O3 K6 which was first detected in Kolkata India has been responsible for many outbreaks in Asia and the USA With the emergence of pandemic clone of *V parahaemolyticus* this organism has assumed significance Although most of the *V parahaemolyticus* outbreaks are invariably related to seafood consumption pathogenic strains are rarely isolated from seafood Virulent strains producing TDH or TRH and the pandemic clone which is responsible for most of the outbreaks that have occurred after 1996 have been rarely isolated from seafood and other environmental samples This could be due to the occurrence of pathogenic strains in the estuarine environment at a lower level compared to non pathogenic strains Another reason can be that the pathogenic strains are more sensitive to dystrophic conditions in the aquatic environment and rapidly become non culturable Similarity in growth kinetics between virulent and non virulent strains also made the isolation of virulent strains from the aquatic environment difficult Several studies were done to determine the factors responsible for an increased virulence and persistence of pandemic clone However none of those studies were conclusive Several researchers have proposed various genetic markers for specific detection of pandemic clone of *V*

parahaemolyticus But many of those genetic markers were found to be unreliable Recently seven genomic islands VPai 1 to VPai 7 unique to pandemic clone were identified This Research Topic is dedicated to improve our current understanding of ecology pathogenesis and detection of pathogenic and pandemic clone of V parahaemolyticus and will also strive to identify areas of future development **Quality Today** ,2003 **The Future of Heritage Science and Technologies** Rocco Furferi,Lapo Governi,Yary Volpe,Francesco Gherardini,Kate Seymour,2022-10-11 This book gathers a selection of contributions dealing with the application of mechanical engineering for preserving and managing cultural heritage It covers advanced techniques for 3D survey modeling and simulation reconstruction data management as well as advanced diagnostics and testing methods It highlights strategies to foster sustainability inclusivity energy saving and waste reuse in preventive conservation of historical buildings and sculptures and large heritage sites Based on contributions presented at the 3rd Florence Heri Tech International Conference held on May 16 18 2022 in Firenze Italy this book offers a timely source of information concerning engineering methods in heritage for both researchers and professionals in the field 108-1
