The Geometry of Spacetime James J. Callahan, 2013-03-09 In 1905 Albert Einstein offered a revolutionary theory special relativity to explain some of the most troubling problems in current physics concerning electromagnetism and motion Soon afterwards Hermann Minkowski recast special relativity essentially as a new geometric structure for spacetime These ideas are the subject of the first part of the book The second part develops the main implications of Einstein s general relativity as a theory of gravity rooted in the differential geometry of surfaces The author explores the way an individual observer views the world and how a pair of observers collaborates to gain objective knowledge of the world He has tried to encompass both the general and special theory by using the geometry of spacetime as the

Behavioural Macroeconomics Paul De Grauwe, Yuemei Ji, 2019-10-25 Modern macroeconomics has been based on the paradigm of the rational individual capable of understanding the complexity of the world This has created a very shallow theory of the business cycle in which nothing happens in the macroeconomy unless shocks occur from outside Behavioural Macroeconomics Theory and Policy uses a different paradigm It assumes that individual agents experience cognitive limitations preventing them from having rational expectations Instead these individuals use simple rules of behaviour Behavioural Macroeconomics introduces rationality by allowing individuals to learn from their mistakes and to switch to the rules that perform better It introduces the idea of endogenously generated animal spirits that drive the business cycle and are in turn influenced by it and applies this model to shed new light on a number of important issues It analyses the role of fiscal policy in stabilizing the economy while maintaining debt sustainability expands the model to include a banking sector and show how banks amplify the booms and busts and explains how animal spirits help to synchronize the business cycles across countries The model set out in Behavioural Macroeconomics leads to very different policy implications from the mainstream macroeconomic model It shows how policymakers have a responsibility to stabilize an otherwise unstable system

Hydropower Economics Finn R. Forsund, 2007-09-19 The state organisation responsible for coordinating the hydropower electricity system in Norway Samkj ringen contacted me in

1990 about the advanced plan for deregulating the electricity system separating generation transmission and distribution and introducing a wholesale market for electricity It was felt that insights about the fundamental nature of running an electricity system based on hydropower was somewhat lacking within the team of academic economists engaged to write background reports by the Oil and Energy ministry responsible for driving the reform of the electricity system When talking to engineers I was fascinated by the world of electricity with its physical laws and weird concepts such as reactive power and electric phase angles Externalities of hydraulic interdependence between river based power stations and highly fluctuating loss and congestion externalities involved in a meshed transmission network had to be recognised Furthermore capturing all these elements required advanced mathematical methods of dynamic programming in a stochastic environment My conclusion was that a market design that neglected these aspects did it at its own peril I predicted volatile prices coming out of a competition between producers facing zero short run variable costs and problems with investments coming forth sufficiently from a social perspective However I can safely say that my report had no impact whatsoever on the Norwegian electricity reform of 1991 that must be regarded not the least by me as being highly successful

Reciprocity, Spatial Mapping and Time Reversal in

Electromagnetics C. Altman,K. Suchy,2013-03-09 The choice of topics in this book may seem somewhat arbitrary even though we have attempted to organize them in a logical structure The contents reflect the path of search and discovery followed by us on and off for the in fact last twenty years In the winter of 1970 71 one of the authors C A on sah baticalleave with L R O Storey s research team at the Groupe de Recherches Ionospheriques at Saint Maur in France had been finding almost exact symme tries in the computed reflection and transmission matrices for plane stratified magnetoplasmas when symmetrically related directions of incidence were com pared At the suggestion of the other author K S also on leave at the same institute the complex conjugate wave fields used to construct the eigenmode amplitudes via the mean Poynting flux densities were replaced by the adjoint wave fields that would propagate in a medium with transposed constitutive tensors et voila a scattering theorem reciprocity in k space was found in the computer output To prove the result analytically one had to investigate the properties of the adjoint Maxwell system and the two independent proofs that followed in 1975 and 1979 proceeded respectively via the matrizant method and the thin layer scattering matrix method for solving the scattering problem according to the personal preferences of each of the authors The proof given in Chap 2 of this book based on the hindsight provided by our later results is simpler and much more concise

Dominant Currency Paradigm: A New Model for Small Open Economies Camila Casas,Mr.Federico Diez,Gita Gopinath,Pierre-Olivier Gourinchas,2017-11-22 Most trade is invoiced in very few currencies Despite this the Mundell Fleming benchmark and its variants focus on pricing in the producer s currency or in local currency We model instead a dominant currency paradigm for small open economies characterized by three features pricing in a dominant currency pricing complementarities and imported input use in production Under this paradigm a the terms of trade is stable b dominant currency exchange rate pass through into export and import prices is high regardless of destination or origin of goods c exchange rate pass through of non dominant currencies is small d expenditure switching occurs mostly via imports driven by the dollar exchange rate while exports respond weakly if at all e strengthening of the dominant currency relative to non dominant ones can negatively impact global trade f optimal monetary policy targets deviations from the law of one price arising from dominant currency fluctuations in addition to the inflation and output gap Using data from Colombia we document strong support for the dominant currency paradigm
