Disability in the Global Sport Arena Jill M. Le Clair, 2013-09-13 Sport is often at the centre of battles for rights to inclusion linked to class race and gender and this book explores struggles centred on disability in different cultural settings in Europe North America Africa Asia and Oceania It challenges oversights and assumptions about the normal body and describes how individual and organizational transformations can occur through sport The abilities of a person are recognised and placed centre stage instead of the individual being forgotten excluded or placed at the margins simply because they have a disability National regional and global change is part of the shift to the rights based approach reflected in the 2006 UN Convention on the Rights of Persons with Disabilities Making sport inclusive affects the accessibility of facilities funding the media policies programs organisations sponsors and spectators and at the same time changes the cultural values of the wider society It also raises issues about competition access and eligibility for different and technologically enhanced cyborg bodies and for those most socially disadvantaged Addressing these questions which

ultimately touch on the real meaning of sport can lead to profound changes in people's attitudes and how sport is organized locally and globally Growth in the influential global organisations of the Paralympic Games Special Olympics and Deaflympics is examined as is the approach to disability in sport in both advantaged and resource poor countries The embodied lives of persons with disabilities are explored utilizing new theoretical models perspectives and approaches This book was previously published as a special issue of Sport in Society

Capturing the Commons James M. Acheson, 2014-08-26 One of the most pressing concerns of environmentalists and policy makers is the overexploitation of natural resources Efforts to regulate such resources are too often undermined by the people whose livelihoods depend on their use One of the great challenges for wildlife managers in the twenty first century is learning to create the conditions under which people will erect effective and workable rules to conserve those resources James M Acheson author of the best selling Lobster Gangs of Maine the seminal work on the culture and economics of lobster fishing here turns his attention to the management of the lobster industry In this illuminating new book he shows that resource degradation is not inevitable Indeed the Maine lobster fishery is one of the

most successful fisheries in the world Catches have been stable since World War II and record highs have been achieved since the late 1980s According to Acheson these high catches are due in part to the institutions generated by the lobster fishing industry to control fishing practices These rules are effective Rational choice theory frames Acheson's down to earth study Rational choice theorists believe that the overexploitation of marine resources stems from their common pool nature which results in collective action problems In fisheries what is rational for the individual fishermen can lead to disaster for the society The progressive Maine lobster industry lobster fishermen and local groups have solved a series of such problems by creating three different sets of regulations informal territorial rules rules to control the number of traps and formal conservation legislation In recent years the industry has successfully influenced new regulations at the federal level and has developed a strong co management system with the Maine government The process of developing these rules has been quite acrimonious factions of fishermen have disagreed over lobster rules designed to give commercial advantage to one group or another Although fishermen and scientists have come to share a conservation ethic they often disagree over how to best conserve the lobster and even the quality of science The importance of Capturing the Commons is twofold it provides a case study of the management of one highly successful fishery which can serve as a management model for policy makers politicians and local communities and it adds to the body of theory concerning the conditions under which people will and will not devise institutions to manage natural resources
