Popov,Markus Hess,Emanuel Willert,2018-08-08 The present book is a collection of open access papers describing the foundations and applications of the Method of Dimensionality Reduction MDR first published in the Journal Facta Universitatis Series Mechanical Engineering in the years 2014 2018 The Method of Dimensionality Reduction MDR is a method of calculation and simulation of contacts of elastic and viscoelastic bodies It consists essentially of two simple steps a substitution of the three dimensional continuum by a uniquely defined one dimensional linearly elastic or viscoelastic foundation Winkler foundation and b transformation of the three dimensional profile of the contacting bodies by means of the MDR transformation As soon as these two steps are done the contact problem can be considered to be solved For axial symmetric contacts only a small calculation by hand is required which does not exceed elementary calculus and will not be a

barrier for any practically oriented engineer Alternatively the MDR can be implemented numerically which is almost trivial due to the independence of the foundation elements In spite of its simplicity all results are exact The present book brings together papers covering the most important aspects of the MDR and providing a practical guide for its use **Passive and Active Measurement** Arvind Krishnamurthy, Bernhard Plattner, 2010-04-01 The 2010 edition of the Passive and Active Measurement Conference was the 11th of a series of successful events Since 2000 the Passive and Active Measurement PAM conference has provided a forum for presenting and discussing innovative and early work in the area of Internet measurements PAM has a tradition of being a workshop like conference with lively discussion and active participation from all attendees This event focuses on research and practical applications of network measurement and analysis techniques This year's conference was held at ETH Zurich Switzerland PAM 2010 attracted 79 submissions Each paper was carefully reviewed by at least three members of the Technical Program Committee The reviewing process led to the acceptance of 23 papers The papers were arranged in nine sessions covering the following areas routing transport protocols mobile devices topology measurement infrastructure characterizing network usage analysis techniques traffic analysis and the Web We are very grateful to Endace Ltd New Zealand Cisco Systems Inc USA armasuisse Switzerland and the COST Action TMA whose sponsoring allowed us to keep registration costs low and to offer several travel grants to PhD students We are also grateful to ETH Zurich for sponsoring PAM as a host *Newsletter* IUPUI (Campus).
