Notio Nova George P. Sakalosky, 2014-01-31 Notio Nova A New Idea by George P Sakalosky Ph D Here is a new and unique idea that describes both the driving force behind cancer and its potential cure In this book quantum concept and model developed by the author will take you into a territory completely off the commonly accepted research track for understanding carcinogenesis Notio Nova rejects the common view that mutations in DNA produce both a cancer genome and a potential cure instead it suggests that the development of the cancer genome begins in DNA with the production of a chemical bond lesion an ozonide located inside a promoter TATA box in the Replication Origin of the Genome The lesion locks the TATA box switch ON and causes the well known unregulated replication of the cancer genome that sustains itself via various mutations This is the conclusion of a fifty

two year study using a new technique in molecular modeling which brought forth the design synthesis and successful testing of three lesion destroying anticancer analogue compounds The conclusion of this new unique research suggests that the old idea of mutation has failed to produce a cure so a new idea must come forth and is here presented About the Author Dr Sakalosky began molecular modeling in 1957 to devise a means for identifying critical energy absorption sites in macromolecular systems He was awarded a doctoral degree at Boston College in 1975 following the completion of interdisciplinary intercollegiate doctoral courses in biochemistry biophysics learning theory and neurochemistry at MIT was accepted as a student member of the MIT Neuroscience Department Tufts University School of Medicine Boston University and Boston College These studies concluded with a doctoral thesis Proton Symmetry Its Implications for learning Theory A Biophysics Concept Dr Sakalosky joined the U S Atomic Energy Commission USAEC in 1963 as a member of the Division of Reactor Development and later served as a member of the office of the Chairman of the U S Atomic Energy Commission The chemical structures in the text are illustrated by Valerie L Pense and Simeon C Daugherty

Motorcycle Accident Reconstruction Nathan Rose, 2022-01-07 Accident reconstruction utilizes principles of physics and empirical data to analyze the physical electronic video audio and testimonial evidence from a crash to determine how and why the crash occurred how the crash could have been avoided or to determine whose description of the crash is most accurate This process draws together aspects of mathematics physics engineering materials science human factors and psychology and combines analytical models with empirical test data Different types of crashes produce different types of

evidence and call for different analysis methods Still the basic philosophical approach of the reconstructionist is the same from crash type to crash type as are the physical principles that are brought to bear on the analysis This book covers a basic approach to accident reconstruction including the underlying physical principles that are used then details how this approach and the principles are applied when reconstructing motorcycle crashes This second edition of Motorcycle Accident Reconstruction presents a thorough systematic and scientific overview of the available methods for reconstructing motorcycle crashes This new edition contains Additional theoretical models examples case studies and test data An updated bibliography incorporating the newest studies in the field Expanded coverage of the braking capabilities of motorcyclists Updated refined and expanded discussion of the decelerations of motorcycles sliding on the ground A thoroughly rewritten and expanded discussion of motorcycle impacts with passenger vehicles Updated coefficients of restitution for collisions between motorcycles and cars A new and expanded discussion of using passenger car EDR data in motorcycle accident reconstruction A new section covering recently published research on post collision frozen speedometer readings on motorcycles A new section on motorcycle interactions with potholes roadway deterioration and debris and expanded coverage of motorcycle falls This second edition of Motorcycle Accident Reconstruction is a must have title for accident reconstructionists forensic engineers and all interested in understanding why and how motorcycle crashes occur
