

HS Biology Unit 1 Mini-Lesson I: Can a parent's environment during pregnancy affect their grandchildren?

1. Read and annotate the introductory paragraphs below. As part of your annotations, mark up the text with at least 3 questions you have about the case study history and two different theories proposed.

While we now know much about the inheritance of traits, as recently as the 1800s much of this branch of science was still a mystery. One prominent theory at the time came from Jean-Baptiste Lamarck who believed that events that occurred during the lifetime of an organism could have an effect on the traits of its offspring. For example, someone who spends their life lifting weights and building up muscle mass would likely give birth to a very fit and muscular child. While the image of a body builder baby is certainly amusing, Lamarckian evolution was largely discredited by later discoveries. Many recent studies however have indicated that some such scenarios could exist.

Recent studies suggest that environmental stresses in a parent may harm the health of subsequent generations including grandchildren. One example includes parents who were pregnant during a 1944 famine in the Netherlands known as the Dutch Hunger Winter had children and grandchildren who were unusually small or prone to diabetes and obesity. Scientists were puzzled by this observation and competing mechanisms for this phenomenon have been developed. Below are the two proposed mechanisms of how the Dutch Hunger Winter affected the children and grandchildren:

- **Proposed Mechanism 1:** Perhaps the Dutch Hunger Winter caused inheritable changes to the DNA and genes of fetuses born to starving parents, which made the certain genes less active — and continued to do so for life. As a result, less of the protein coded for by an affected gene is made, and metabolism slows down.
- **Proposed Mechanism 2:** Dutch famine probably led to many miscarriages and early deaths. It's possible that the survivors had some genetic variant that made them resilient and gave them a distinctive genetic profile.
