Advanced Aircraft Design Egbert Torenbeek, 2013-07-29 Although the overall appearance of modern airliners has not changed a lot since the introduction of jetliners in the 1950s their safety efficiency and environmental friendliness have improved considerably Main contributors to this have been gas turbine engine technology advanced materials computational aerodynamics advanced structural analysis and on board systems Since aircraft design became a highly multidisciplinary activity the development of multidisciplinary optimization MDO has become a popular new discipline Despite this the application of MDO during the conceptual design phase is not yet widespread Advanced Aircraft Design Conceptual Design Analysis and Optimization of Subsonic Civil Airplanes presents a quasi analytical optimization approach based on a concise set of sizing equations Objectives are aerodynamic efficiency mission fuel empty weight and maximum takeoff weight Independent design variables studied include design cruise altitude wing area and span and thrust or power loading Principal features of integrated concepts such as the blended wing and body and highly non planar wings are also covered The quasi analytical approach enables designers to compare the results of high fidelity MDO optimization with lower fidelity methods which need far less computational effort Another advantage to this approach is that it can provide answers to what if questions rapidly and with little computational cost Key features Presents a new fundamental vision on conceptual airplane design optimization Provides an overview of advanced technologies for propulsion and reducing aerodynamic drag Offers insight into the derivation of design sensitivity information Emphasizes design based on first principles Considers pros and cons of innovative configurations Reconsiders optimum cruise performance at transonic Mach numbers Advanced Aircraft Design Conceptual Design Analysis and Optimization of Subsonic Civil Airplanes advances understanding of the initial optimization of civil airplanes and is a must have reference for aerospace engineering students applied researchers aircraft design engineers and analysts NASA Technical Memorandum ,1991 □□□□□□□□□□ ,2003

Aerospace Materials and Material Technologies N. Eswara Prasad, R.J.H. Wanhill, 2016-11-07 This book serves as a comprehensive resource on various traditional advanced and futuristic material technologies for aerospace applications encompassing nearly 20 major areas Each of the chapters addresses scientific principles behind processing and production production details equipment and facilities for industrial production and finally aerospace application areas of these material technologies The chapters are authored by pioneers of industrial aerospace material technologies This book has a well planned layout in 4 parts The first part deals with primary metal and material processing including nano manufacturing The second part deals with materials characterization and testing methodologies and technologies The third part addresses structural design Finally several

advanced material technologies are covered in the fourth part Some key advanced topics such as Structural Design by ASIP Damage Mechanics Based Life Prediction and Extension and Principles of Structural Health Monitoring are dealt with at equal length as the traditional aerospace materials technology topics This book will be useful to students researchers and professionals working in the domain of aerospace materials

EUROSHOCK - Drag Reduction by Passive Shock Control Egon Stanewsky, Jean Delery, John Fulker, Wolfgang Geißler, 2013-04-17 It has been recognized by the European Union EU that the survival of the Aeronautical Industries of Europe in the highly competitive World Aviation Market is strongly dependent on such factors as time to market of a new or derivative aircraft and on its manufacturing costs but also on the achievement of a competitive technological advantage by which an increased market share can be gained Cooperative research is therefore continuously encouraged and co financed by the European Union in order to strengthen the scientific and technological base of the Aeronautical Industries thus facilitating the future design and manufacture of civil air craft products and providing the technological edge needed for survival Targets of research within Area 3 Aeronautics of the Industrial and Materials Technology Programme 1991 1993 have been identified to be aircraft efficiency cost effectiveness and environmental im pact Concerning aircraft efficiency relevant to the present research a reduction in aircraft drag of 10010 a reduction in aircraft fuel consumption of 30010 and a reduction in airframe en gine and system weight of 20% are envisaged Meeting these objectives has of course also a strong positive impact on the environment In order to further technology the philosophy is to avoid spreading the available resources too thinly and rather concentrate on the feasibility demonstration of a limited number of tech nologies of high economic and industrial impact

Synthesis of Subsonic Airplane Design E. Torenbeek, 2013-06-29 Since the education of aeronautical engineers at Delft University of Technology started in 1940 under tae inspiring leadership of Professor H J van der Maas much emphasis has been placed on the design of aircraft as part of the student s curriculum Not only is aircraft design an optional subject for thesis work but every aeronautical student has to

carry out a preliminary airplane design in the course of his study The main purpose of this preliminary design work is to enable the student to synthesize the knowledge obtained separately in courses on aerodynamics aircraft performances stability and control aircraft structures etc The student's exercises in preliminary design have been directed through the years by a number of staff members of the Department of Aerospace Engineering in Delft The author of this book Mr E Torenbeek has made a large contribution to this part of the study programme for many years Not only has he acquired vast experience in teaching airplane design at university level but he has also been deeply involved in design oriented research e.g. developing rational design methods and systematizing design information I am very pleased that this wealth of experience methods and data is now presented in this book
