

Steps of Manufacturing MA

(\$100 in materials will produce approximately \$1,000 in MA)

- The over the counter or prescription medication(s) (e.g., remedies for cold, cough, diet, energy, allergy or asthma, etc.) may be ground into a powder.
- The powder may be dissolved and the liquid chemicals may be added to the solution to start the process of extracting the active ingredients.
- The solution may be "cooked" in glassware.
- The "cold" method may involve adding red phosphorous and iodine to the mixture.
- The solution may be poured through materials such as coffee filters to remove the undesired residue.
- The solution may be stored in jars until the liquid layers separate to create a more pure mixture.
- Other elements such as sodium, potassium, lithium and/or anhydrous ammonia may be added.
- Once the ammonia evaporates, the mixture may return to white.
- The reaction of the residual sodium metal and water may form sodium hydroxide which may convert the mixture into MA.
- The MA may be ready for dilution and sale.
