The SAGE Handbook of Research in International Education Mary Hayden, Jack Levy, Jeff Thompson, 2015-10-13 The landscape of international education has changed significantly in the last ten years and our understanding of concepts such as international, global and multicultural are being re-evaluated. Fully updated and revised and now including new contributions from research in South East Asia, the Middle East, China, Japan, Australasia and North America, the new edition of this handbook analyses the origins, interpretations and contributions of international education and explores key contemporary developments including internationalism in the context of teaching and learning, leadership standards and quality in institutions and systems of education, the promotion of internationalism in national systems. This important collection of research is an essential resource for anyone involved in the practice and academic study of international education, including researchers and teachers in universities, governmental and private curriculum development agencies, examination authorities, administrators and teachers in schools.

The Training of African Teachers in Natal from 1846-1964 Nicolas Schicketanz, 2024-06-07 The history of African teacher training in Natal is one of the most neglected and under-researched aspects of educational history. This book attempts to set out the administrative history of this field as a first step in stimulating the further research that is so urgently needed. Print edition not for sale in Sub-Saharan Africa.

Research Handbook on the Law of the Paris Agreement Alexander Zahar, 2024-05-02 This comprehensive Research Handbook sets out a systematic analysis of the Paris Agreement, taking into account developments since it entered into force in 2016. It explores the treaty's capacity as an instrument of international law to compel state action to address the universal threat of climate change.

Models and Estimation of Genetic Effects José M Álvarez-Castro, Rong-Cai Yang, 2015-04-17 Ronald Fisher needed to develop elaborate models of genetic effects in order to set the foundations of Quantitative Genetics in his 1918 paper. The correlation between relatives on the supposition of Mendelian inheritance. Since then, many significant implementations have been made to model genetic effects. However, at the verge of one century after Fisher's kick-off models of genetic effects keep on being discussed and implemented. Indeed, the relatively recent advent of QTL analyses challenged the state of the art of this field by providing researchers the opportunity to obtain and analyze estimates of genetic effects from real data. In this context, the development of this field was not exempt of some polemics like the debate about the convenience of the functional and the statistical epistasis approaches.

This research topic is meant to provide recent developments in models and estimation of genetic effects and to enrich the discussion about how and why models of genetic effects must be further developed and applied. The articles in this Research Topic shall thus extend, refine and/or provide a refresh look at Fisher's original models of genetic effects and their application to genetic effects estimation and to improve our understanding of evolutionary processes and breeding programs. **19**
