Conservation Biogeography Richard J. Ladle, Robert J. Whittaker, 2011-01-11 CONSERVATION BIOGEOGRAPHY The Earth's ecosystems are in the midst of an unprecedented period of change as a result of human action Many habitats have been completely destroyed or divided into tiny fragments others have been transformed through the introduction of new species or the extinction of native plants and animals while anthropogenic climate change now threatens to completely redraw the geographic map of life on this planet The urgent need to understand and prescribe solutions to this complicated and interlinked set of pressing conservation issues has led to the transformation of the venerable academic discipline of biogeography the study of the geographic distribution of animals and plants The newly emerged sub discipline of conservation biogeography uses the conceptual tools and methods of biogeography to address real world conservation problems and to provide predictions about the fate of key species and ecosystems over the next century This book provides the first comprehensive review of the field in a series of closely interlinked chapters addressing the central issues within this exciting and important subject

Council of Europe, 2012-04-11 The effects of climate change on ecosystems are complex The impact on the species and habitats protected by the Bern Convention may differ widely depending on the species their habitats and location This publication includes seven expert reports presenting concrete measures for addressing the vulnerability of Europe s natural heritage in the face of climate change and its effects and how this heritage must adapt in order to survive With this publication the Council of Europe aims to increase awareness about the links between biodiversity and climate and emphasise the large potential for synergies when addressing biodiversity loss and climate change in an integrated manner
