The Instructional Leader's Guide to Implementing K-8 Science Practices Rebecca Lowenhaupt, Katherine L. McNeill, Rebecca Katsh-Singer, Benjamin R. Lowell, Kevin Cherbow, 2021-10-25 An accessible engaging primer on the eight science practices at the heart of the Next Generation Science Standards NGSS providing K-8 instructional leaders with the grounding they need to ensure excellent science instruction in every classroom The NGSS reconceptualize science instruction by redefining the teacher as someone who helps students construct their own knowledge by thinking like scientists and engaging in discrete science practices However with STEM teachers in short supply and generalists often feeling underprepared to teach elementary and middle school science what can instructional

leaders do to ensure students get a strong start in this critical area and learn to love science Although a content neutral approach to supervision one that emphasizes general pedagogical features such as student engagement cognitive load or classroom management is undoubtedly beneficial the best instructional leaders know that content specific approaches are necessary to achieve real excellence We therefore need to go deeper if we want to engage both teachers and students with the science practices We need science specific supervision With that in mind the authors provide vignettes and examples of the science practices in use advice on observing science classrooms concrete look fors and guidance on fostering ongoing teacher learning They also offer a rich compendium of research and evidence based resources including sample lessons FAQs and more than a dozen downloadable tools to facilitate classroom observation feedback sessions and professional development This is an essential guide for any K 8 instructional leader who wants to empower all teachers to provide all students with rich science experiences and develop the cognitive and noncognitive skills students will need to thrive in more advanced courses work and society

Ambitious Science Teaching Mark Windschitl,Jessica Thompson,Melissa Braaten,2020-08-05 2018 Outstanding Academic Title Choice Ambitious Science Teaching outlines a powerful framework for science teaching to ensure that instruction is rigorous and equitable for students from all backgrounds The practices presented in the book are being used in schools and districts that seek to improve science teaching at scale and a wide range of science subjects and grade levels are represented The book is organized around four sets of core teaching practices planning for engagement with big ideas eliciting student thinking supporting changes in students thinking and drawing together evidence based explanations Discussion of each practice includes tools and routines that teachers can use to support students participation transcripts of actual student teacher dialogue and descriptions of teachers thinking as it unfolds and examples of student work The book also provides explicit guidance for opportunity to learn strategies that can help scaffold the participation of diverse students Since the success of these practices depends so heavily on discourse among students Ambitious Science Teaching includes chapters on productive classroom talk Science specific skills such as modeling and scientific argument are also covered Drawing on the emerging research on core teaching practices and their extensive work with preservice and in service teachers Ambitious Science Teaching presents a coherent and aligned set of resources for educators striving to meet the considerable challenges that have been set for them

Early Engineering Learning Lyn English,Tamara Moore,2018-05-29 This book addresses engineering learning in early childhood spanning ages 3 to 8 years It explores why

engineering experiences are important in young children's overall development and how engineering is a core component of early STEM learning including how engineering education links and supports children's existing experiences in science, mathematics and design and technology both before school and in the early school years. Promoting STEM education across the school years is a key goal of many nations with the realization that building STEM skills required by societies takes time and needs to begin as early as possible. Despite calls from national and international organisations, the inclusion of engineering based learning within elementary and primary school programs remains limited in many countries. Engineering experiences for young children in the pre-school or early school years has received almost no attention even though young children can be considered natural engineers. This book addresses this void by exposing what we know about engineering for young learners including their capabilities for solving engineering based problems and the few existing programs that are capitalising on their potential.
