

ICND1 -100-101 Study Guide (CCENT)

SECTION 1 (9%) – Purpose & Function of Various Network Devices (Routers, Switches, Bridges, Hubs)

1.1 – Recognize Purpose & Functions of Various Network Devices (Routers, Switches, Bridges, Hubs)

a. Routers

- i) Purpose: intelligent Layer 3 device for packet forwarding (route); decision encapsulated
- ii) Functions: 3 point device that negotiates route to span greater than media distance allow; doesn't allow for incorrect input...and allows for input & encapsulation

b. Hub

- i) Purpose: multiport Layer 1 repeater for media connection issues (media distance limitations)
- ii) Functions: All-to-all; multiports connect like repeaters; allows connection of more than 2 devices (non-segments, central point for talking); sharing – creates more collisions/crashes (bandwidth) slower congestion, no traffic control (filtering) & only half duplex (one directional communication)

c. Bridges

- i) Purpose: intelligent Layer 2 (data link) control
- ii) Functions: semi-autonomously L2M segments; negotiates inputs; reduces collisions; learn & filter traffic based on MAC Address; **Half-Duplex**
 - o **Collision Domain** – sends out every port except port was received on; unknown output – it is destination MAC address in frame; broadcasts, multicasts
 - o **Forwarding Domain** – concept of MAC Address Tables (learn) (store) kept & from the device connected to it
 - o **Filter** – based off MAC Address Tables, keep those frames depending on source & destination addresses in a frame

d. Switches

- i) Purpose: multiport bridges with additional features; intelligent Layer 2
- ii) Functions: **Full-Duplex** (bi-directional communication in same time); faster than bridges (10%); switching done in hardware
- iii) Switching Method – (used) Forward, Filter (see the bridge section above)
- iv) Benefits
 - o Each port runs segments (LAN) creating collision domains for the connected device
 - o Allows multiple simultaneous communications between devices on different ports
 - o Full-Duplex supports, in effect doubling bandwidth available to connected device
 - o Support for inter segment connections for devices configured with different speeds

e. Memory Types

- i) **NVRAM** – Non-volatile memory; stores bootup; **ROM**; hard coded user factory configuration
- ii) **VRAM** – non-volatile RAM; stores routing table permanently upon startup
- iii) **Flash** – **VRAM** type that stores ROM image; retained upon shutdown
- iv) **RAM** – active memory; running configurations; connected to NVRAM upon using "copy" cmd
