A formative assessment task from

*STAAR Biology:*

*Assessment Activities for the Texas Readiness Standards*

The purpose of this activity is to reinforce students' understanding that systems in animals constantly interact with one another to keep the animals functioning properly. Students will use an interactive manipulative activity to demonstrate an understanding of the importance of interactions between animal organ systems, and the functions and components of the systems that perform regulation, nutrient absorption, reproduction, and defense. Teachers can use this activity to formatively assess student understanding about systems as a collection of cycles, structures, and processes that interact in animals.

**Interactions between the mammalian main and accessory olfactory systems** Jorge A Larriva-Sahd,Micheal Baum,2015-01-05 The functional cross talk and structural interaction between the main and accessory olfactory bulb is a central problem in mammalian sensory neurobiology The early supposition that volatile substances and pheromones most of them hydrosoluble molecules are exclusively sensed and decoded by the main MOS and accessory olfactory systems AOS respectively needs to be revised In

fact a large number of structural and functional evidences accumulated during the last few decades suggests that rather than separated entities the MOS and AOS act synergically bringing about physiological and behavioural responses The goal of the present Research Topic will be to gather original research studies and revision papers performed by the most authoritative research groups that have recently contributed to the broad area of sensory neurobiology Special attention should be given to contributions addressed to the MOB and AOB cross talk involving current neuroanatomical techniques **The Meat**
