Advanced Polymer Composites for Structural Applications in Construction L C Hollaway, 2004-04-22. Over the past three decades, advanced polymer composites have emerged as an attractive construction material for new structures and the strengthening/rehabilitation of existing buildings and bridges. The techniques associated with the technology, analysis, and design of polymer composites in construction are continually being researched, and the progress made with this exciting material will continue at an ever-increasing rate to meet the demands of the construction industry. This volume of proceedings is from the Second ACIC 2004 International Conference, which focused on the application and further exploitation of advanced composites in construction. The conference allowed practising engineers, asset managers, researchers, and representative of regulatory bodies to promote the active exchange of scientific and technical information on the rapidly changing scene of advanced composites in construction. This volume focuses on the presentation of new concepts, techniques, and case studies, which will lead to greater exploitation of advanced polymer composites and FRP materials for civil engineering infrastructure rehabilitation and renewal. Handbook of Composites George Lubin, 2013-11-27. The development of advanced composites. Forecasts indicate that the potential, spanning a brief period from inception to usage in automobiles in the early 1990s, will amount to only 15 to 20 years. It epitomizes millions of pounds of advanced materials, the rapidity with which a generation's change in the state of the art can take place. This is in contrast to past history, in which it took 25 years or more of rapid progress to reach the state of the art. The hardware capability is progressing so rapidly that the knowledge and familiarity of research before a new structural material was designed can hardly keep pace. We have a technological obligation now, not just to mature this advanced technology and its applications, but also to communicate the state of the art to the class of materials advanced composites designers in a form in which it can be applied and established as feasible by the fabrication of practical structures. I believe that of raw fiber with exceptional strength and modulus-to-weight ratios, the practical fabrics clearly provide a portion of this missing link. **Polymer Matrix Composites**
