This realization has fuelled the re-ignition of debate over globalization. Today's globalization is no longer the globalization that Theodore Levitt a former professor at the Harvard Business School described in 1983 in his world famous article 'The Globalization of Markets'. Although in old days Levitt and his successors had not seen globalization as an utopian state free of problems no days globalization has been reshaped completely. Therefore in the perception of the editors it is justified to use the phrase Globalisation 2.0 for the range of effects interpenetrating global economic arrangements. Globalisation 1.0 will never be restored again. Since the subprime crisis made its way to the global arena in the year 2008 companies and managers are confronted with the breathtaking speed of global regional and local changes. It is more than a provocation to divide developments into cause and effects. Forecasts in strategic management are no longer valid even for the moment they are published. Uncertainty occupies the driving seats in global regional and local oriented companies. *High-level Petri Nets* Kurt Jensen, Grzegorz Rozenberg, 2012-12-06 High level Petri nets are now widely used in both theoretical analysis and practical modelling of concurrent systems. The main reason for the success of this class of net models is that they make it possible to obtain much more succinct and manageable descriptions than can be obtained by means of low level Petri nets while on the other hand they still offer a wide range of analysis methods and tools. The step from low level nets to high level nets can be compared to the step from assembly languages to modern programming languages with an elaborated type concept. In low level nets there is only one kind of token and this means that the state of a place is

described by an integer and in many cases even by a boolean value In high level nets each token can carry complex information which e g may describe the entire state of a process or a data base Today most practical applications of Petri nets use one of the different kinds of high level nets A considerable body of knowledge exists about high level Petri nets this includes theoretical foundations analysis methods and many applications Unfortunately the papers on high level Petri nets have been scattered throughout various journals and collections As a result much of this knowledge is not readily available to people who may be interested in using high level nets
